1 Introduction

SAFA inspections are part of a European Union safety programme and shall be executed in a harmonised and standardised way in all EU Member States, in Iceland, Norway, and Switzerland, and in all States with which EASA signed a working arrangement on SAFA. For this reason the Annex to the Commission Directive 2008/49/EC calls for guidance material to give clear guidance and instructions to the inspectors performing SAFA ramp inspections. Inspectors must have received training in their relevant field of expertise before performing any SAFA inspections; details can be found in the EASA Guidance Material on the Qualification of Inspectors.

This procedure contains guidance material as required by the mentioned Annex as well as guidance material in addition to those required. The following table is a cross reference between the paragraphs of the Annex and the chapters of this procedure.

1.2 Standard Reports

1.2.1 Introduction

Directive 2004/36/CE ("SAFA Directive") in its Article 3 requires Member States to put in place a mechanism to collect any information deemed useful to establish and maintain a high uniform level of civil aviation safety in Europe. Such information shall include important safety information¹ as referred to in Article 3(a), collected through several means and shall be kept using the Standard Report form.

The Standard Reports shall be exchanged with the Commission and the Member States as required by Article 5 of the SAFA Directive. In addition, those reports shall, in accordance with article 3.2 of Regulation (EC) No 768/2006, be communicated to the Agency. The Standard Reports are one of the sources of information to be taken into account when identifying which aircraft shall be subject to a ramp inspection.

Although Article 3 of the SAFA directive also requires that follow-up information as described under (b) and (c) of that Article shall be kept as Standard Reports, it is considered to be compliant if such information is recorded in the concerned Ramp Inspection Report and the monthly report on the status of follow-up actions (as referred to in Paragraph 6.4 of the Annex to Directive 2008/49/EC).

1.2.2 Exchanging Standard Reports

Like Ramp Inspection Reports, Standard Reports can be entered into the centralised SAFA Database. By doing so, Members States are meeting the requirement of both using the Standard Report format and exchanging it with the other stakeholders. Any useful information like documents, pictures, etc. can also be stored in the database and linked to the Standard Report.

1.2.3 Disidentification of the source

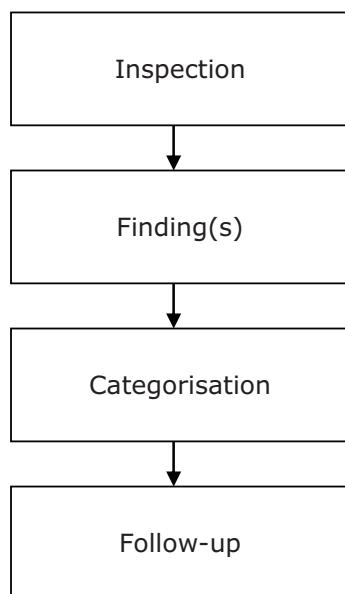

Important safety information might be received from passengers or whistleblowers. Although not specifically addressed by Article 6.4 of the SAFA directive, it is self-explanatory that information in the Standard Report should be disidentified to such extent that the source cannot be identified.

¹ Examples of important safety related information could be, but not limited to, ATC reports on level-busts, communication failure or difficulties, and abnormal take-off lengths, information received from maintenance organisations concerning lack of AD compliance or maintenance work performed incorrectly, reports from the general public/whistleblowers concerning perceived unsafe situations, reports from pilots on incorrect use of radio-telephony phraseology, reports from airport personnel on observed unsafe practices, factual information concerning accidents and incidents which occurred in Member States' airspace.

2 SAFA Ramp Inspection and related processes - overview

2.1 General

- a) The inspection process consists of different elements like the preparation of the inspection, the determination of which items need to be inspected and which standards to use. Chapter 3 contains guidance on these elements.
- b) If during the Ramp Inspection a deviation from the applicable Standards is established, it is considered a finding. Guidance on findings can be found in chapter 4.
- c) There are three different categories of findings, depending on the impact the finding has on the safety of the aircraft and/or its occupants. Chapter 5 provides guidance on the categorisation of findings.
- d) Based on the outcome of the inspection and subsequent categorisation, follow-up actions and classifications have been defined. Details can be found in chapter 6.

2.2 SAFA National Coordinator

The SAFA programme coordination is performed by EASA in accordance with Commission Regulation (EC) No 768/2006. To facilitate the implementation of SAFA activities within each Member State, a coordination function is needed at a national level. A National Coordinator should therefore be appointed by each Member State tasked with the day-to-day coordination of the program at national level. The position of the "SAFA national coordinator" should not be confused with the "National coordinator" as mentioned in Regulation (EC) No 736/2006 (on the working methods for Standardisation inspections); however, as reflected in Appendix 7, it is strongly recommended that with regard to the domain of SAFA, the SAFA national coordinator should be taking up the role of the "standardisation" national coordinator.

The tasks and obligations that could be allocated to the SAFA National Coordinator are listed in Appendix 7. Please note that these duties may be allocated to different persons within the

SAFA participating State, however it is deemed important that the coordination of these duties is executed by the SAFA National Coordinator.

Besides appointing a SAFA National Coordinator, it is advisable to nominate a "Coordinator National Operators". This person would, with regard to the operators under the oversight of his/her NAA, act as the focal point for the other SAFA Participating States.

3 SAFA Ramp Inspection

3.1 General instructions

- a) The SAFA Ramp Inspection should preferably be performed by at least 2 inspectors. The main elements of the inspection, the visual inspection of the aircraft exterior, the inspection on the flight deck and the inspection of the passenger cabin and/or cargo compartments can be divided among the inspectors.
- b) Inspectors are entitled to perform a SAFA inspection and search the aircraft according to Article 16 of the Convention on International Civil Aviation (search of aircraft): "...
the appropriate authorities of each of the contracting States shall have the right... to search aircraft of other contracting States...".
- c) Should an operator refuse to permit the performance of a SAFA inspection without a valid reason, the competent authority should consider the detention of the aircraft (provided that the national legislative framework allows for this). In such a case, the competent authority must immediately inform the State of oversight.
- d) In order to be able to inspect foreign aircraft operators, each authority should arrange direct access to the ramp or other relevant areas for their inspectors, or have made an arrangement with the applicable airport authorities on how to get such access. The authority should provide the inspectors with the necessary tools (e.g. flashlights, digital camera, mobiles) and protective clothing suitable for the environmental circumstances (e.g. fluorescent vests, ear protection, anti-static clothing).
- e) Inspectors must show tact and diplomacy when performing a SAFA Ramp Inspection. Any unnecessary contact with passengers should be avoided; however, this may be justified so as to be able to inspect certain elements in the cabin, such as:
 - a. proper stowage of cabin baggage under the seat,
 - b. overweight in overhead luggage bins,
 - c. baggage in front of emergency exit,
 - d. infants/children over the minimum age determined by the State of oversight should have their own seat,
 - e. passengers repartition in the cabin, compared to the loadsheet data,
 - f. sufficient number of seats,
 - g. observing the boarding process during normal operations, during refuelling in progress.
- f) Departure delay of an aircraft should be avoided. However, when an inspector discovers an issue which may have a major effect on flight safety or requires further investigation to be clarified, a delay may be justified, for example:
 - a. the tyres appear to be worn beyond the limits (central groove no longer visible), however reference must be made to the applicable AMM to determine the actual limit;
 - b. an oil leakage (e.g. 5 drops/minute) must be checked against the applicable AMM to determine the actual limit;
 - c. a flight crew member cannot produce his/her licence. Clarification must be sought from the operator to confirm that the flight crew member has a valid licence by requesting, for instance, a copy of the licence to be sent to the inspectors for verification.

Note: the limitations quoted in the examples are here for illustration purposes and should not be applied during a ramp inspection, knowing that the defects raised must be studied in

respect of the limitations enacted in the applicable documentation of the inspected airline

- g) A certain amount of inconvenience to flight and cabin crews, handling agents and other personnel involved in ground handling activities may arise, but inspectors must do everything possible to reduce hindrance to the minimum, for example:
 - a. they should try to be as precise and complete as possible when asking for A/C documents from flight crew. This should result in a minimum of discussion time allowing the flight crew to deal with their primary task of flight preparation;
 - b. they should ask the senior cabin crew member to dedicate one crew member to assist them with the inspection tasks;
 - c. they should debrief the commander of the aircraft after the inspection task is completed;
 - d. they should inform cargo loading staff of possible hindrance due to inspection task in cargo compartment;
 - e. when carrying out inspections on the flight deck, the flight crew should be allowed to give priority to staff directly involved in the flight preparation (e.g. fuel master, load-planning agent, handling agent pax. info, etc.).
- h) SAFA inspectors should try to perform all of the SAFA checklist items. When circumstances prevent this (time, manpower, etc.), try to inspect those elements which, according to inspectors' preparation and experience, are likely to be more safety critical: this is depending on the particularities of the inspected flight. Elements to be taken into account are:
 - a. In general, certain elements are less safety critical. E.g. a noise certificate has far less impact on safety than incorrectly completed Mass & Balance documentation (or incorrect calculation) and should therefore be given a lower priority.
 - b. The difference in the aircraft configuration. Whereas for a cargo configuration the securing of the cargo and the segregation of the dangerous goods is important, for a passenger configuration refuelling with passengers on board could have a higher priority.
 - c. Previous SAFA results. If serious and/or recurrent findings were raised during previous inspections on e.g. the MEL, this might become more important than the flight preparation on which previously no non-compliances were found.
 - d. Type and age of the aircraft. Some aircraft types are known to have issues with e.g. leakages or missing screws. Age of the aircraft could be of influence as well.
- i) Nothing should be done in the course of a SAFA Ramp Inspection that hinders the crew/passengers that could just as well be inspected on another aircraft of the same operator without causing delay/hindrance.
- j) Whenever possible, it is advised to contact the operator's representative at the airport so that he/she can be present during the SAFA Ramp Inspection. Experience shows that the operator's representative may be helpful in providing support especially in facilitating communication with the crew or operator home base.

3.2 Inspection preparation

The inspection preparation procedure includes three main elements:

- selection of the aircraft/operator to be inspected;
- information gathering about the aircraft and the operator;
- preparation of the inspection itself.

The inspection preparation procedure described above is designed primarily to cater for pre-planned inspection, however for non-planned inspections (e.g. spot-check, focussed and follow-up inspections) the same procedure should be followed as far as practical.

3.2.1 Selection criteria

According to Article 4 of the Directive 2004/36/EC, Member States "shall put in place the appropriate means to ensure that third-country aircraft *suspected of non-compliance with International safety standards* (...) shall be subject to ramp inspections". This can be achieved by long term planning (for those operators of which the suspicion as well as the arrival date is known well in advance) or a short term planning (where information leading to the suspicion and/or information on the arrival date and time is not known on the long term). The information sources which could be useful for identifying the suspected aircraft are mentioned in Article 4.1 of the before mentioned Directive, and the most useful ones for establishing a schedule are repeated under points a. and b. below. In addition to this obligation, Member States may also perform checks at random ("Spot checks" in the absence of any suspicion).

Notwithstanding the above, Member States shall prioritise their ramp inspections on the subjects included in the list referred to in Article 3 of Commission Regulation (EC) No 351/2008, since the aircraft/operators in this list are by definition "suspected". The SAFA Database contains a module where information about prioritised subjects can be easily retrieved.

Member States should plan their activities by establishing a schedule for the performance of SAFA inspections. This schedule is the competent authority's responsibility.

The schedule may consist of:

a. Long term planned inspections

Operators performing scheduled operations could be selected on a long-term basis for inspections, since their schedule is known to the competent authority. Information leading to a suspicion could originate from (e.g.):

- previous ramp inspections performed on this operator;
- previous prioritisation lists, indicating that the operator or the State of operator is already suspected for a longer time;
- Standard Reports according to Paragraph 1.2.

b. Short term planning

Short term planning should be used when information, leading to a suspicion, is received on a short-term. Such information might be originating from (but not limited to):

- previous inspections done by the Member State;
- the SAFA database (inspections performed by other Member States);
- passenger complaints;
- Air Navigation Services Providers (reports that an aircraft has performed abnormal manoeuvres which give rise to serious safety concerns since entering the airspace of the Member State);
- "whistleblowers"(ground handling or maintenance personnel) regarding poor maintenance, obvious damage or defects, incorrect loading, etc.;
- evidence that the State in which an aircraft is registered may not be exercising proper safety oversight; or

- concerns about the operator of the aircraft which have arisen from occurrence reporting information.

Short term planning should also be used to verify compliance, in absence of any suspicion, when new operators, any new type of operations or new type of aircraft being introduced, following information received from the department granting traffic rights.

c. Spot checks

Provided that the Member State has established rules to carry out random (spot check) inspections, Ramp Inspections may be carried out in the absence of any suspicion of non-compliance. Such rules should contain at least the following principles:

- repetitive inspections should be avoided on those operators on which previous inspections have not revealed safety deficiencies, unless they form part of a series of partial inspections (due to time limitations) with the intention to cover the complete checklist;
- the selection would enable the widest possible sampling rate of the operator population flying into their territory; however, some airlines are only operating flights to a very limited number of States (if not even to only one sometimes). The involved States should consider inspecting regularly those subjects – even more if these airlines also appear on the prioritisation list;
- no discrimination based on the nationality of the operator, the type of operation or type of aircraft.

3.2.2 Data collection

Using the information sources in 3.2.1b, the competent authority should build a knowledge file on the operator. Such a file would enable the inspector to:

- Verify the rectification of previously found non-compliances
- Select the items to be inspected if the time available does not permit a full inspection

The SAFA database has a special “preparation of inspections” module to allow for a comparison between operators in a given span of time as well as a quick determination of the number and type of findings on a specific operator over a specific time. This might be useful when the inspector has to choose between several operators arriving at the same time.

3.2.3 Preparation of the inspection

After the aircraft/operator has been selected and all the available information is collected, the next step is the preparation of the inspection itself.

The following steps should be taken shortly before the planned inspection:

- Last update of the operating schedule for the selected operator should be obtained from airport, operators, or ground handling officials (see Note 1);
- Distribute the tasks between the SAFA inspectors involved, especially in the case of a limited inspection time and/or the size and the complexity of the aircraft;

- Select the checklist items to focus on taking into account the General instructions in paragraph 3.1h;
- There should be co-operation with security, ground and all other officials involved in airport activities, to enable the SAFA team to reach the aircraft to be inspected (see Note 2);
- For planning purposes, EUROCONTROL has a special module in which you will be able to find relevant flight information concerning any targeted operators. The application form to request access to the CFMU system can be found on their website².

Note 1: In general, the operators issue operating schedules twice per year. However, there might be "last minute changes" to these; therefore, SAFA team members should ensure they have the latest update of the schedule. A valuable source can be the internet; most airports have a website displaying information on arrival and departure times of scheduled flights. Schedule information on special flights such as cargo, unscheduled or private flights, may need to be specifically requested from the airport.

Note 2: Where officials from different organisations (i.e. customs, security, DG inspectorate) have to work in co-operation during the inspection, a procedure on cooperation may need to be developed at a National level. There is no standardised method as most Member States have different airport procedures for SAFA inspectors.

3.3 SAFA inspection items

The SAFA Ramp Inspection checklist (mentioned in Annex II to Commission Directive 2008/49/EC) contains a total of 54 items. Of these checklist items, 24 relate to operational requirements (A-items) to be checked on the flight deck, 14 items address safety and cabin items (B-items), 12 items are concerning the aircraft condition (C-items) and 3 items (D-items) are related to the inspection of cargo and the cargo compartment. In case of any findings not related to the other items of the checklist, they may be administered by the E-item (General) of the checklist.

The inspection findings and subsequent categorisation have to be reported on the SAFA Ramp Inspection Report after completion of the inspection, even if there are no findings raised. The instructions on the completion of the Ramp Inspection Report can be found in Appendix 2.

Depending on the time available for the SAFA Ramp Inspection not all items but a limited number of items may be checked (see General instructions in 3.1 h).

Depending on the items to be inspected, a SAFA Ramp Inspection may be performed on landing or on departure of the aircraft. Fuel remaining and cargo area (overloading, restraining, segregation, etc.), are examples of items that could be checked on landing. Flight preparation and storage of baggage in the cabin could be checked on departure. However, inspectors should be aware of the following constraints; an inspection after

² http://www.cfmu.eurocontrol.int/cfmu/public/standard_page/userdocs_forms_sysaccess_fornonansp.html .

landing should not jeopardise the total resting time of the flight crew and an inspection prior to departure should not lead to a departure delay unless there is a good reason (see paragraph 3.1.f).

For each inspection item of the SAFA Ramp inspection report detailed guidance has been established (see appendix 1, SAFA PDFs). This guidance specifies in more detail what to inspect and how to categorise it. In addition, references are made to the applicable standard(s). The list of PDFs is not exhaustive and other findings may be raised by the inspector (see Chapter 5c).

3.4 Standards

- a) The purpose of a SAFA inspection is to check the compliance with international standards (i.e. Chicago convention, its Annexes and ICAO regional standards) which are the minimum standards to be observed by any aircraft engaged in international navigation. In addition, when inspecting the technical condition of an aircraft, it should be checked against the aircraft certification specifications and manufacturer's standards³. Furthermore, compliance with national standards that are declared applicable to all operators flying to that state may be checked.
- b) The applicable standard has to be reported on the ramp inspection input form when a finding has been raised. When other standards are being checked during a SAFA Ramp Inspection and a finding has been raised, the standard should explicitly be stated in the Ramp Inspection Report (e.g. when a Ramp Inspection Report is included in the SAFA database containing a finding which is a non-compliance with a national standard, the competent authority should ensure that the standard is marked as 'N' = national standard).
- c) The SAFA database has the possibility to incorporate findings not (yet) contained within the PDFs. When making a new description mention should be made of the applicable standard and its correct reference, for example: found cracked bearing in nose gear retraction cylinder, standard M, reference AMM 32.xxx.
- d) For findings where a PDF is available, and especially for UDF, the applicable standard reference (when not already specified) should be entered as precisely as possible. This should be particularly applied when findings are raised against manufacturer's standards or aircraft certification specifications.

³ Contained in a set of documents issued by the aircraft TC holder which detail the conditions for the serviceability of the systems and components installed on an aircraft, e.g. AMM, SRM, CMM, SWPM/WDM.

4 SAFA Findings

4.1 General

A finding is a non-compliance with an applicable standard⁴ (see paragraph 3.4 [STANDARDS]). Inspectors, when raising a finding, must avoid using "best practices", company procedures or standards other than international safety standards they were used to in any other duty or employment.

When a deviation from a standard has been determined, the inspector should be certain that the finding is applicable to the specifics of the inbound and/or outbound flight. For instance, having no electric torch on board is only a finding during night-flight operation and not enough life-vests only when required as per the provisions of Annex 6, part I, Chapter 6.5.2.1 and 6.5.2.2 (i.e. flight over water on a distance greater than 50 NM from the coastline...). Nevertheless, such kind of information should be reported as a General Remark.

When a Contracting State finds it impracticable to comply with an international standard, it is entitled to notify a difference to ICAO in accordance with Art. 38 of the Chicago Convention⁵. However, a third country notification of a difference has no effect within the territory of another Contracting State, and merely constitutes information to other Contracting States which might accept or not such lower standard: SAFA ramp inspectors should indeed raise a finding in case of non-compliances⁶. These differences may however be taken into account in the follow-up process of the ramp inspection report (as detailed in the follow-up procedures). Whenever EU standards are lower than ICAO standards, then the EU standards should be applied to EU and non-EU operators⁷.

⁴If after the inspection the operator or its State of oversight is providing documented evidence objectively indicating that the finding is erroneous or incorrectly categorised, then the inspecting authority should make the necessary corrections in the SAFA Database and inform the operator and/or its State of oversight accordingly.

⁵Art. 38 Chicago Convention has the purpose to protect the sovereignty of a Contracting State by granting the right to derive from an international standard. International standards cannot become binding against the will of ICAO Contracting States. However, ICAO contracting States are not bound by or obliged to accept a lower standard of another State's aircraft in their territory even if the latter notified the difference according to Art. 38.

⁶On another State's territory the differing State is obliged to: fulfil the international (ICAO) standard (Art. 37 in conjunction with Art. 33 of the Chicago Convention), or to get permission (ex-ante authorisation) by the State in whose territory the aircraft intends to enter to participate in air navigation with a certificate or license that was issued although the aircraft (respectively person) failed to satisfy an international (ICAO) standard at the time of its certification (respectively issuance of the license), see Art. 39 in conjunction with Art. 40 of the Chicago Convention. If the above-mentioned permission has been duly requested and delivered by the Inspecting NAA, the non-compliance should however be reported as a General Remark - cat G.

⁷For instance, EU-OPS is requiring the presence of a copy of the AOC to be on board of an aircraft, while ICAO standards require the presence of a certified true copy of the AOC. Absence of certified true copy should not constitute a finding (provided a non-certified copy is available on board).

When following the procedure as described in chapter 4.2 f) below, the category 2 findings raised (failure to identify, report and or assess significant technical defects) should be grouped as long as it concerns the same system and "root cause"; if not, findings should be reported separately with the exception of missing fasteners. The number of (out of limits) missing fasteners (and therefore the related category 3 findings) found during one inspection could be considerable. However, this high number of cat 3 findings would not reflect the perceived impact on safety. Therefore, findings on missing fasteners in the primary structure should be grouped and reported as one finding; the same for the missing fasteners in the secondary structure.

With regard to non-compliances on missing fasteners, findings can only be raised if the maintenance documentation contains clear limits and/or dispatch conditions. In the absence of such clear manufacturer standards, inspectors should only raise findings if their expert judgement (possibly supported by licensed maintenance personnel) is such that similar circumstances on comparable aircraft would be considered to be out of limits.

A SAFA ramp inspection aims at assessing the compliance with the applicable international standards of an aircraft used in operations. It should be noted that several other entities are playing a crucial part in this process, such as the authority of oversight of the AOC, the authority issuing the flight crew Licences, the authority of oversight of the airworthiness of the aircraft. Therefore, some non-compliances may be highlighted in fields where the inspected airline may not be the responsible entity (e.g. issue of certificates of registration, issue and oversight of the AOC or Licences). Nevertheless, as part of the ramp inspection process, these non-compliances will be raised by the inspectors in accordance with the SAFA ramp inspection procedures, and recorded as such in the final report of the airline's inspection.

When inspectors are raising issues on the ramp that may lead to the identification of findings, they should, as much as possible, document and keep records of the non-compliances detected. This could be done, for instance, by taking pictures of the deficiency itself, as well as pictures of the manufacturer references used to assess the technical defects, pictures or copy of the TLB entries performed. These elements could be very useful in the follow-up phases of the ramp inspection either to explain in details and illustrate the finding detected, or to be able to exchange appropriate documented evidence when findings are challenged.

Note 1: In exceptional cases, a single fault may give rise to more than one finding under different inspection items, for example: a tyre worn beyond limits whilst the commander refuses to enter the defect in the Technical Log (or equivalent) would give rise to findings under C04 and A23.

Note 2: On manufacturer standards, a finding to these standards should always be demonstrated in relation with aircraft technical documentation (AMM, SRM, CDL, SWPM, etc.) and MEL references. If significant defects are suspected, the operator should be asked to demonstrate compliance with the standards. Deviations from these standards can only be acceptable if the State of oversight has issued a formal waiver/concession detailing conditions and/or limitations to allow the aircraft to continue to operate for a specific period of time before final repair, unless the aircraft will perform a ferry flight and the validity of the CofA is not affected. In case the deviation leads to a temporary invalidation of the Certificate of Airworthiness, the operator will be required to obtain a permit to fly from the State of Registry, and the relevant permission from the affected States (departure, arrival and every overflown States).

Note 3: Certain States may have national standards applicable to foreign operators when operating in their territory. Deviations from such standards should be reported as findings only if:

- *the national standards have been published (e.g. AIP) and are applicable to foreign operators flying into their territory;*
- *a deviation from those standards has an impact on safety.*

*For such findings the report should indicate 'N' in the column **Std.** and the appropriate reference should be included in the column **Ref.***

Any other deviation from national standards which does not have an impact on safety (e.g. insurance certificate in USD instead of SDR) should be recorded as cat. G (General Remark).

A participating State should issue internal procedures for the use of its inspectors on what national standards and how compliance with those standards should be checked, and how any possible findings should be categorised.

4.2 Detection/reporting/assessment of significant technical defects

A technical defect is considered to be any material fault pertaining to the aircraft, its systems or components. Minor defects are typically without influence on safety. Although minor defect are not considered to be findings, they should be brought to the attention of the operator using general remarks (cat. G). Those defects which are potentially out of limits are considered to be significant defects. Further assessment is required to determine if the significant defect is within or outside the applicable limits. Such defects should be known to the operator since they should have been detected during regular maintenance, aircraft acceptance procedure or pre-flight inspections.

Care should be taken when dealing with technical defects which did not necessarily had to be detected by the operator since the approved maintenance programme (AMP) does not require the operator to detect such issues during turn-around inspections; examples are missing fasteners, bonding wires and the cabin emergency lighting which are normally not part of the pre-flight inspection. Therefore, no finding should be raised under A23/A24 that such defect was not detected/reported/assessed. However, inspectors should not ignore cases where those defects led to an out of limits situation; apparently the AMP failed to ensure that the aircraft is in an dispatchable condition and therefore such non-compliance should be raised as a cat. 3 finding.

Since significant defects might have appeared during the inbound flight, the inspector must give the operator the opportunity to identify and assess a significant defect during the preflight inspection before he raises a finding. However, this does not mean that the inspector should wait with his inspection of the aircraft condition until the operator performed/completed the preflight inspection.

A "defect within limits but not recorded" should not be raised as a technical finding. If the significant defect appeared to be within limits, the safety focus changes from the defect itself to the concern that the defect was not detected/assessed by the operator.

The following procedure should be used (see also the flowchart below) in particular when inspecting the Aircraft Condition. In addition, the same procedure may also be applied when inspecting items A, B or D:

- a) If time allows, the inspector should inspect the aircraft condition after the operator has completed the preflight inspection.
- b) The inspector may perform the aircraft condition inspection (C-Items) in advance of the operator's inspection in order to make best use of the time available for the whole

inspection. In that case the inspector should wait with reporting the defects identified until the operator has completed the pre-flight inspection.

- c) The inspector should subsequently check if the operator detected the significant defects found by the inspector. Examples of significant defects are, but not limited to, multiple screws missing in the corner area or in the leading edge of panels, running/dropping leaks, dents in pressurised areas of the fuselage. A single screw missing in the middle of a fairing, traces of old leaks and non-structural damages to e.g. fairings can, in many cases, considered to be "minor defects". Such defects should be brought to the attention of the operator as general remarks (cat. G).
- d) If the operator detected the significant defect, but did not properly report and/or assess it, the operator should assess the defect. If the defect appears to be within limits, a finding should be raised under A23 (Defect notification and rectification) mentioning "Known defect not reported/assessed". The inspector should however, when collecting the evidence for this finding, take into account the reporting system used by the operator. For instance, if the operator uses a Technical Logbook and/or a damage chart, a finding could be raised if the defect was not entered. Additionally, a category "G" (general) remark should be created for the defect. If the defect is outside limits, a category 3 finding should be raised under the respective inspection item. In order not to penalise the operator twice, no supplementary finding, related to this defect, should be raised in that case under A23.
- e) If the operator did not detect the significant defect, the inspector should inform the crew on the non-identified defects. Subsequently, the operator should assess the defect in order to determine if the defect is within or outside dispatch limits. If the defect is within limits, a category 2 finding mentioning "Pre-flight inspection performed but without noticing significant defects" should be raised under A24 (pre-flight inspection) addressing the deficiency that the defect was not detected. Additionally, a category "G" (general) remark should be created for the defect. If the defect is outside limits, a category 3 finding should be raised under the respective inspection item. In order not to penalise the operator twice, no supplementary finding, related to this defect, should be raised in that case under A24.
- f) Multiple (Cat 2) findings on the same system⁸ (e.g. hydraulic leakage, fuel leakage, dents) and "root cause" (not identified, not reported or not assessed) raised under A23 or A24 should be grouped. E.g. dents on the LH wing and the #2 engine intake which were not identified should be grouped, as well as hydraulic leakages which were identified but not assessed. On the other hand, a fuel leakage on the left wing which was not identified and a fuel leak on Engine #2 which was reported but not assessed should be noted as two findings. As described in chapter 4.1.
- g) An unnecessary delay of the aircraft should be avoided. However, if the aircraft suffers a delay caused by the assessment of not properly assessed/not identified findings, such a delay is justified according to paragraph 1.4 of the Annex to the Commission Directive 2008/49/EC where it is mentioned that possible causes for delay could be "(...) doubts regarding the (...) airworthiness of the aircraft (...)".

Even when operators are carrying out their pre-flight inspection (aircraft acceptance) procedures only briefly before the departure of the aircraft, the inspector should wait until these procedures have been completed before reporting to the operator the identified defects. Although an investigation, which may trigger delays, might subsequently be required once the inspector has informed the airline of the missed technical defect, the airline procedure would have resulted in the same delays if the flight crew would have identified the same defect requiring the associated investigation. Therefore, it is the operator which takes the risk to perform the pre-flight inspection close to departure; as

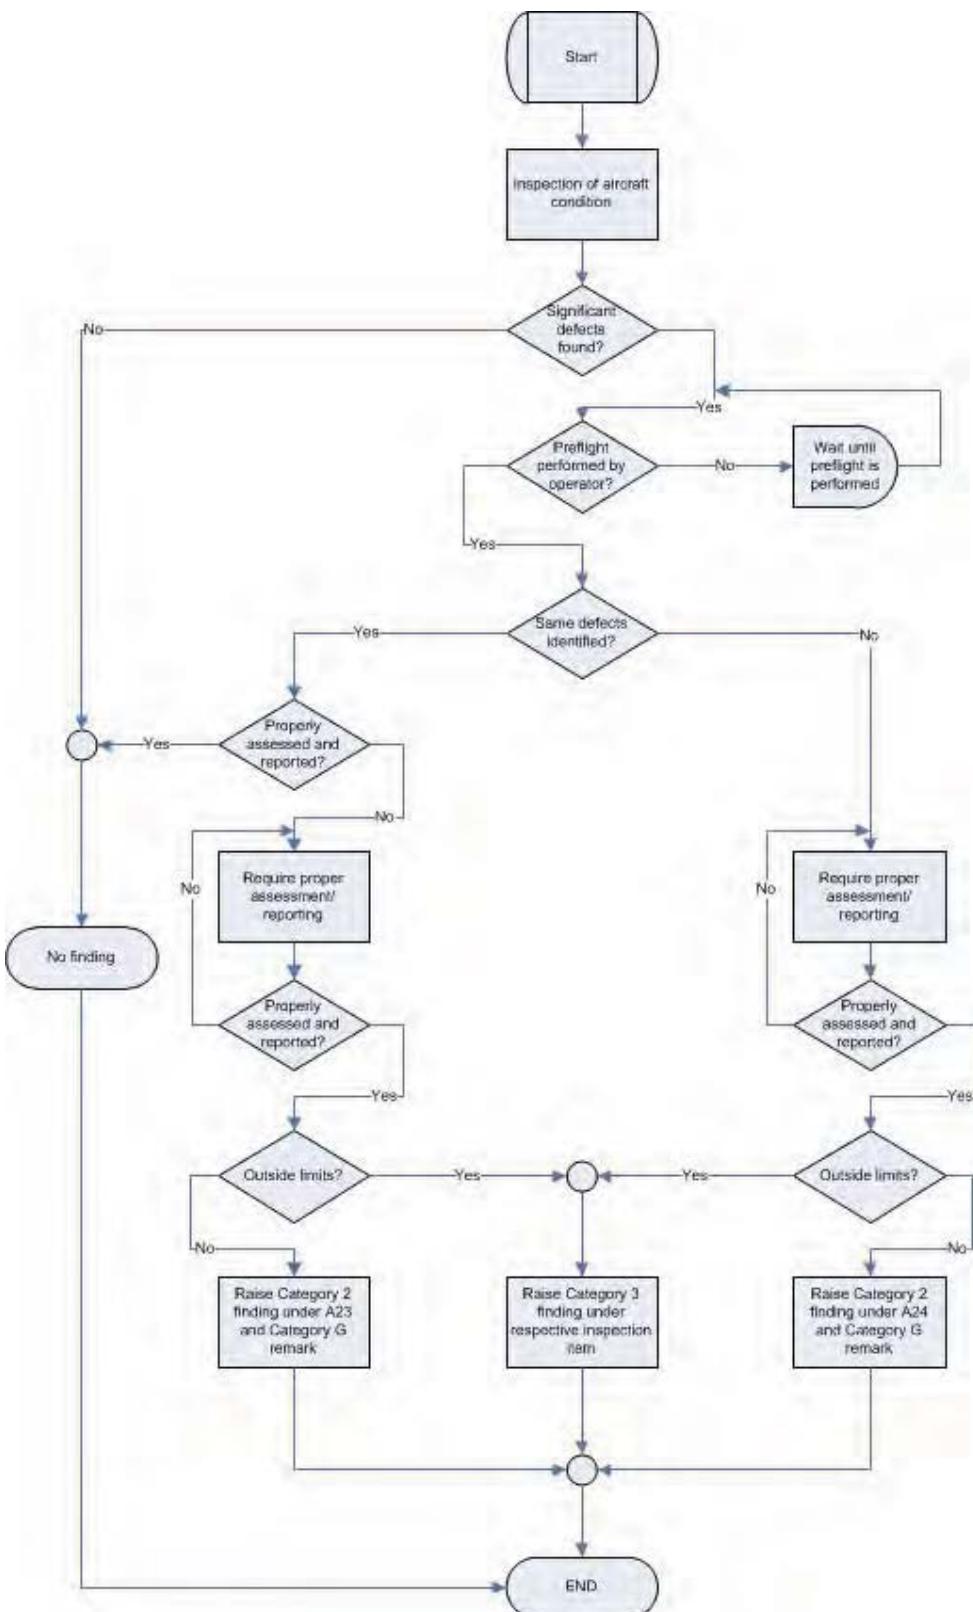

⁸ Inspectors should use the ATA system taxonomy (e.g. Chapter 28 Fuel, Chapter 32 Landing gear) to determine if findings are related to the same system.

long as the SAFA ramp inspectors are acting in accordance with the §3.1f) of this guidance material, the operator is responsible for any consequences linked to delays (including cancellation of flights) imposed by the assessment of missed technical defects.

SAFA Ramp Inspections

Guidance material

4.3 Assessment of findings on certificates and licenses prior to categorisation

The procedure described in Chapter 4.2 already applies the principle that, before categorising findings, a proper assessment of the encountered situation should be done. Only when it is clear to the inspector the extent to which the non-compliance deviates from the requirements, can a proper category of the finding be chosen. This implies that inspectors should not raise category 3 findings with the only intent to enforce further investigation/assessment.

The before-mentioned principle should be applied in other inspection areas as well. E.g. in some cases, the absence of a licence or certificate could potentially have a major impact on safety; however, after receiving the appropriate evidence⁹, it may become clear that the impact on safety is less than initially foreseen. A typical example is where the licence of a member of the flight crew is not on board. If before departure evidence is provided that the crew member is indeed holding an appropriate and valid licence, but simply did not carry this licence, the impact on safety is lesser and the category 1 finding "Flight crew holding appropriate Licence but not carried on board at the time of the inspection" should be raised. If such evidence is not provided before departure, the category 3 finding "Flight crew without appropriate licence" requiring corrective actions before the flight is authorised. Under no circumstances, a flight crew member should be permitted to perform flying duties without receiving confirmation that s/he has been issued an appropriate and valid licence.

A similar approach could be used for the aircraft documents (certificate of registration, airworthiness, radio station licence) and the airline's authorisations (AOC and OPS Specs), although issues detected on these certificates may not always lead to the identification of category 3 finding on the ramp (certificate of registration or radio station license for instance).

4.4 Deficiencies under the control of the operator

Non-compliances which are under control of the operator (in accordance with the applicable requirements) are not to be raised as findings. If e.g. an aircraft diverted because of technical defects and the aircraft is inspected upon arrival, such defects should not be raised during a ramp inspection following the diversion as long as the defect is properly reported (e.g. through the TLB) and subsequently assessed.

⁹ See also chapter 6.1.3, 4th paragraph.

5 SAFA - Categorisation

If during the inspection it is established that a certain situation is not in compliance with the relevant standards, this is then considered a finding as defined in Chapter 4.

- a) For each inspection item, 3 categories of possible deviations from the standards have been defined. The findings are categorised according to the perceived influence on flight safety. This means that a category 1 finding is considered to have a minor influence on safety. A category 2 finding may have a significant influence and a category 3 finding may have a major influence on safety.

Note: Any other safety relevant issues identified during a SAFA inspection, although not constituting a finding, can be reported as a General Remark (Cat G) under each inspection item, for example: an electrical torch missing or unserviceable during a flight conducted entirely in daylight.

- b) The finding should be categorised according to the list of PDFs in appendix 1. In the SAFA PDF list the description, categorisation and reference to the applicable standard is given. Although the list of PDFs is as complete as possible, it cannot cover all possible deviations that may occur.
- c) The SAFA PDF list is intended to be used by the inspector to guarantee a common description and categorisation of findings. The inspector should make use of this list in the majority of situations and should always privilege the use of PDF while reporting SAFA findings in the SAFA database. In those cases where there is no appropriate PDF, the inspector should, based upon his proficiency and the impact on aviation safety, make a sound judgement into which category the finding needs to be placed. The SAFA database allows for findings to be entered by the user. While inserting an UDF in the SAFA database, the inspector should make sure to always report the associated Standard Reference representing the basis for the identification of the finding. These UDFs will be monitored by EASA periodically and after evaluation may become part of the existing PDF list. Therefore the PDF list will be updated periodically. Notice of updates will be given via the appropriate channels to the SAFA community.
- d) Findings on arrival flights being identical to the findings raised for departure flights should lead to the same categorisation, although the corrective action might not be possible when the flight has been completed. For example, an incorrect mass and balance sheet (outside operational limits) found on arrival should be categorised as a cat. 3. Obviously this cannot be corrected; however the appropriate class 3 action could be to confirm that the mass and balance calculations are within operational limits for the outbound flight.
- e) In exceptional cases, where multiple findings have such an interrelation that the impact on safety is higher, the category of such findings may be increased to reflect the impact on safety. The increase in category should be explained in the detailed description of the finding.

6 SAFA – Follow-up actions

Chapter 6 of Annex II to the Directive 2004/36 (as amended by the Directive 2008/49) requires that follow up actions will be taken after the SAFA Ramp Inspection. The follow-up actions may be distinguished in two stages. The first stage is the follow-up action directly resulting from the findings, the second stage is the monitoring and follow-up of any correspondence, sent out to the operator and the State of oversight, which should result in closure of the findings.

6.1 Actions resulting from an inspection

Based on the results of the inspection and on how the findings have been categorised, common follow-up actions have been defined. The relations between the category of findings and the resulting class of actions to take are given in Chapter 7, Appendix 3 (class of actions matrix).

This chapter repeats the requirements to hand over the Proof of Inspection to the flight crew and to have a written communication with the operator and its competent authority. Although crews, operators and authorities become more and more familiar with the SAFA programme, it might be necessary to inform them about the SAFA programme and to explain them what is expected from their side when an inspection has been performed. For this purpose two templates for information leaflets are proposed in Appendix 4; one for the operator and its competent authority and one for the general public. These leaflets may be e.g. handed out to the flight crew, may be attached to the written communication sent to the operator or handed out to the passengers in case they raise questions about the inspection performed.

The inspecting authorities are invited to adhere as much as possible to these templates in the interest of standardisation and harmonisation. Contact details for the inspecting authority should be added to the last paragraph of the leaflet.

6.1.1 Class 1 action: information to the captain

A class 1 action is to be taken after each inspection, and consists of providing information about the results of that SAFA inspection, regardless of whether findings have been identified or not. In accordance with article 6.3 of the before mentioned Annex, this is achieved by a verbal debriefing and the delivery of the Proof of Inspection (POI) to the aircraft commander (or, in his/her absence, to another member of the flight crew or the most senior representative of the operator). When completing the POI, the following should be taken into account:

- The POI does not require the category of the finding to be mentioned. However, every Member State may decide to include more information to be shown on the POI than the minimum required (e.g. the delay incurred as a result of the inspection). Member States may choose to add the category of the finding in order to inform the flight crew as complete as possible on the inspection results.
- Only the issues mentioned in the POI should be reported as findings in the final SAFA ramp inspection report. Any other relevant information which was not included in the POI should only be reported in the final SAFA RI report as a General Remark or in the additional information box.
- When handing over the POI to the commander/operator representative, the inspector should ask him/her to sign the POI whilst explaining that the signature does not mean that he/she agrees with the findings. The signature only confirms that the POI has been received by the commander/operator representative.

6.1.2 Class 2 action: Information to the authority and the operator

Category 2 and 3 findings are considered to have a significant and major influence on safety. Therefore, when category 2 and/or 3 findings have been raised, written communications must be made in accordance – with Article 6.4 of the above mentioned Annex – to both:

- The operator:
The communication should request that corrective actions are taken (or alternatively the provision of a corrective action plan) and evidence supporting the corrective actions taken; in case of no focal point is known for the inspected operator, its Quality department might be the most suitable point of contact.
- The state of oversight:
The communication shall contain, where appropriate, a request for confirmation that they are satisfied with the corrective actions taken by the operator. This might be appropriate, for example, but not limited to:
 - i. a high number of findings,
 - ii. repetitive findings,
 - iii. lack of appropriate response from the operator,
 - iv. where there is evidence of consistently poor standards demonstrated by operators from that State,
 - v. where action by the State of oversight may be required given the seriousness of the findings.

The state of oversight should also be informed when certain findings indicate possible shortcomings at state level (e.g. medical certificate does not indicate the medical class).

Note: In Appendix 5, guidance is given on the content of the written communication and templates are provided for written communication to the operator and its authority.

The primary source of information to enable an operator to take swift action to address safety deficiencies is the POI. In order to inform the states of oversight in sufficient time to permit appropriate action to be taken and to confirm to the operator the findings made, these communications should be made not later than 30 working days after the inspection. In the case where the operator has already replied, to the satisfaction of the competent inspecting authority, based on the information contained in the POI, the written communication to the operator might not be required to be sent.

Note: In exceptional cases where multiple category 2 findings have been found and the accumulation of these findings or their interaction justifies a corrective action, the class of action may be increased to a class 3 action.

6.1.3 Class 3 actions: Restrictions or corrective actions

A class 3 action follows a category 3 finding which are considered to have a potential major effect on the safe operation of the aircraft. For that reason, Article 6.5 of the said Annex requires that action(s) need to be taken before the departure of the aircraft. On the ramp inspection report only the actions required/imposed by the inspector should be mentioned.

If the operator voluntary corrected a cat. 1 or 2 finding before the flight, this should not be reported as a class 3b action. Instead, such voluntary action should be mentioned in the "Additional information box".

If the category 3 (major) findings that have been established during the SAFA Ramp Check concern damage of a nature such that the aircraft is no longer airworthy, this has to be communicated immediately to the State responsible for overseeing the airworthiness of the aircraft. Although the first contact may be, as a matter of urgency, accomplished by telephone, it is advisable to use written communication procedures. For ICAO guidance on this matter, refer to ICAO Annex 8 Part II Chapter 3.5 – Temporary Loss of Airworthiness.

Evidence related to findings on licences and certificates should be provided by the issuing authority. However, if the inspection is performed outside regular opening hours of the issuing authority, the inspecting State may decide to accept evidence from other sources as well, provided that the inspecting State seeks confirmation of the validity of such evidence at the earliest opportunity with the issuing authority. The ramp inspection report should mention which evidence was provided and by whom, including subsequent confirmation from the issuer.

The class 3 action is divided into 4 sub-actions:

Class 3a. Restriction on the aircraft flight operation

The inspector(s) performing the ramp inspection have concluded that, as a result of some deficiencies identified during the inspection, the aircraft may depart only under certain restrictions. Some examples of class 3a actions are:

- restrictions on flight altitudes if oxygen system deficiencies have been found,
- a non-revenue flight to the home base if allowed for by the MEL,
- some seats that may not be used by passengers,
- a cargo area that may not be used.

Class 3b. Corrective actions before flight

The ramp inspector(s) have identified some deficiencies that require corrective action(s) before the intended flight. Such corrective actions may be:

- (temporary) repairs to defects according to the AMM,
- recalculation of mass and balance, performance calculations and/or fuel figures,
- a copy of a missing Licence/document to be sent by fax or other electronic means,
- proper restraining of cargo.

Class 3c. Aircraft detained by inspecting National Aviation Authority

An aircraft is grounded in a situation where the category 3 (major) findings are not corrected by the operator before flight. Because the safety of the aircraft and its occupants is at stake, the aircraft has to be prevented from resuming its flight and has to be 'grounded' until the safety hazard is removed. This class of action should be imposed only if the crew refused to take the necessary corrective actions or to respect the restrictions on the aircraft flight operation. A class 3c action would also be appropriate when an operator refuses to permit the performance of a SAFA inspection without a valid reason (see paragraph 3.1 c), provided that the Inspecting NAA has set forth provisions in its national regulation covering this case.

Class 3d. Immediate operating ban

In case of an immediate and obvious safety hazard a competent authority may react by imposing an operating ban on an operator or an aircraft.

6.2 Further follow-up

In the case where category 2 or 3 findings have been found, the related action(s) should have been taken. The follow-up however does not end there, further follow-up and/or monitoring is required.

Based on the acceptance by the Inspecting Member State of the differences notified to ICAO by other States, the finding raised during this ramp inspection could be considered as closed in the follow-up part of the process of the ramp inspection, without being provided with detailed corrective and/or preventive actions from the inspected airline or its associated competent authority. As far as the SAFA ramp inspections are concerned, acceptance by Member States of differences has to be done in a uniform and harmonised manner and should be coordinated by the Agency with all the SAFA States.

6.2.1 Class 2 action

The class 2 actions comprise of communications to be made to the operator and to the State of oversight.

- Communication to operators:

This communication always need further follow-up since they should contain a request for corrective actions taken or planned. The Member State should monitor if a reply is received and if it gives sufficient reason to close the finding(s) or prompts the need to request further information. In order to close the finding, the reply of the operator does not necessarily need to contain evidence that the deficiency has been corrected; the "corrective action taken" by the operator might also be the implementation of a corrective action plan. It is up to the Member State to decide, based on the related risk and impact, whether or not a finding may be closed based on future corrective actions taking into account the severity and recurrence of the detected findings. Depending on the severity and recurrence of the findings detected, the Inspecting NAA may consider the actual closure of the associated report(s) only after having received satisfactory documented evidence of appropriate implementation of preventive actions.

- Communication to authorities:

The communication is primarily meant to inform the State of oversight; no reply is expected to these communications. Only where appropriate, the State of Oversight should be asked for "confirmation that they are satisfied with the corrective actions taken" by the operator. In this case, the Member States should monitor if such a reply is received and if the content is satisfactory.

Any follow-up communication from the operators and the authorities should be acknowledged and they should be informed about the closure of findings. Any request for clarification should equally be responded by the inspecting authority. The feedback or clarifications from the Inspecting authority should be performed within 30 working days.

If communications are taking place with the operator only, the State of oversight should, as much as possible, be copied with the associated replies from the Inspecting authority, as these elements can be very valuable in its oversight activities. It is especially the case for the information on the closure of ramp inspections findings sent by the inspecting authority to the inspected operator (when the latest is sent either by e-mail or official letter).

The operator should be allowed 30 days to reply. In case the operator does not react to the initial communication, the contact details should be verified followed by another attempt to obtain a reply from the operator whilst copying the competent authority in the State of Oversight. If this is again unsuccessful, that competent authority of the operator should be requested to intervene by encouraging the operator to reply. In the request, the inspecting

authority should explain that no reaction from the operator could be interpreted as a "lack of ability and/or willingness of an air carrier to address safety deficiencies".

Findings should remain "open" as long as no satisfactory response of the operator and/or the competent authorities in the State of Oversight was received; alternatively, findings could be closed if a re-inspection confirms that the appropriate corrective action was taken. In the SAFA Centralised Database, a comment should be added to each open finding that despite several reminders (possibly including date and means) no response was required. Evidence of the communication could be uploaded as report attachments.

If the inspecting authority received confirmation that the operator does not exist anymore, findings could be closed whilst explaining this reason for closure in the justification.

6.2.2 Class 3 actions

Depending on which class 3 of action has been taken when a cat 3 finding has been found, certain further follow-up actions may be deemed necessary to verify if the restrictions are respected or if corrective actions have been taken. Although it is preferred to perform such verification, this might not always be required (e.g. if the inspector has indications satisfying him/her that appropriate actions will be taken) or possible (e.g. for flight segments outside the EUROCONTROL area). It is up to the Member State to determine if verification is feasible and needs to be done. Especially for restrictions imposed during a ramp inspection, if the *a posteriori* verification shows that the airline did not respect them, this information should be mentioned in the final ramp inspection report or should be reported by means of a Standard Report (see §1.2).

- Class 3a (restrictions on the aircraft operation)

Restrictions have been agreed/imposed. Verification of adherence to the restrictions might be considered. E.g. adherence to a restricted flight altitude may be checked by checking the ATC flight plans and/or the actual altitude flown as reported by the EUROCONTROL CFMU system. If some seats were to be blocked for their usage by passengers, this might be checked just before departure to confirm that the seats are not occupied;

- Class 3b (Corrective actions before flight)

A corrective action is required from the operator before the flight is commenced, therefore it should be possible to verify the corrective actions taken (e.g. if the tyre has been changed, if the recalculation of mass and balance has been done [correctly], etc.);

- Class 3c (Aircraft grounded by inspecting NAA)

At first, the inspecting state has to make sure that the aircraft will not depart as long as the reasons for the grounding remain.

Secondly, the grounding needs to be communicated immediately to the state of oversight and the operator home base. Any records of communication and other evidence should be gathered as evidential material.

Before lifting a grounding prompted by a deficiency which continues to affect the validity of the certificate of airworthiness for the aircraft, and for which an appropriate permit to flight has been issued, the inspecting State shall verify that the operator obtained the relevant permission¹⁰ from any State which will be overflown [art. 7.2 of Directive 2004/36/CE Grounding of aircraft].

¹⁰ Aircraft with a permit to fly from a competent authority of an EASA State of registry (if covered by Regulation (EC) No 216/2008, Commission Regulation (EC) No 1702/2003 and Commission Regulation (EC) No 2042/2003) do not need permission from EASA member States overflown.

- Class 3d (Immediate operating ban)

When class 3d action is imposed it is usually in addition to a Class 3a, 3b or 3c action. Therefore, the further follow-up for the SAFA programme is considered to be covered by the follow-up of those actions. However, when class 3d action is taken, Member States should be mindful of their obligations under Regulation (EC) No 2111/2005.

6.3 Monthly report

Article 2.4 of the Commission Regulation (EC) No 768/2006 requires the Agency to:

- advise the European Commission and the Member States on immediate actions or follow-up policy,
- report potential safety problems, and
- propose coordinated actions to the European Commission and the Member States when necessary on safety grounds and ensure co-ordination at the technical level of such actions.

For that reason, the Agency needs to be informed on follow-up actions taken by the Member States. Therefore, Member States are required by paragraph 6.4 of the Annex to Commission Directive 2008/49/EC to make available to the Agency a monthly report on the status of follow-up actions taken pursuant to ramp inspections.

In order to standardise the format of the data of such report, Member States are requested to use the template as shown in appendix 6.

As of version 2.0 of the centralised SAFA Database, the follow-up of inspections can be done electronically. Member States which make full use of these functionalities of the Database are considered to meet the requirement to send a monthly report since they provide all the information in "real time".

6.3.1 Monthly report form instructions

The report will contain an overview of all the correspondence related to follow-up actions, sent out or received by the Member States during the previous calendar month. The report shall be sent in a spreadsheet format (i.e. Microsoft® Excel) to the Agency (SAFA Coordination Section) by Email (safa@easa.europa.eu) within two weeks. The monthly reports should be sent aggregated (i.e. the monthly report for April will include also the reports for January, February and March).

With the introduction of the new database on 21 September 2011, the new follow-up functionality became available. When fully using this functionality, States are considered to meet the requirement to send the monthly report to EASA.

Once authorities and operators have registered to the database and are consequently using the follow-up feature, all required data will be stored by and can be retrieved from the database. However, since not all authorities and operators have obtained access we are still in a transition phase; nevertheless, information such as:

- a. date of notification
- b. means of notification
- c. follow-up information (by creating entries specifying/quoting the actions proposed/taken by the operator and/or its authority)

can be entered manually in the Database instead of entering this into the monthly report.

At this stage, for all reports entered until 21 September 2011, as well as for replies to previously sent communications, you should either:

- update the monthly report and continue to send it to us until all inspections have been closed; or

- transfer the above mentioned data on inspections with open findings to the database follow-up module which renders the monthly report obsolete.

Since providing the information "real time" via the SAFA Database is considered to meet the requirement to send a monthly report, there is no need to send any subsequent monthly report anymore as soon as the open inspections have been transferred to the database, or all inspections on the previous monthly report were closed. EASA should be informed as soon as you stop sending the monthly report for one of the above-mentioned reasons.

Explanatory comments to the form:

- General
 - The electronic template will be made available to the Member States. By using the electronic version, the user is able to simply add new cells (e.g. when correspondence has been sent to both the State of operator and State of registry if different) to a row or add more rows to the form.
 - Not the date of inspection, but the correspondence date determines in which monthly report the correspondence should be listed.
 - Columns 2 and 4 are considered to be optional. For maximum efficiency and monitoring ability, Member States are encouraged to fill out the information in these columns as well.

Header and Footer:

- State: the official name of the Member State;
- NAA: the official name of the competent authority;
- Month: the concerned calendar month including the calendar year.

OPERATOR SECTION

Column (1) "Ramp inspection report number(s)":

- Every row should represent the information related to a certain ramp inspection.

Column (2) "Operator Code" (optional)

- List the 3 letter ICAO operator code as in the SAFA database

Column (3) "Operator Name"

- List the operator's name as in the SAFA database

Column (4) "Findings" (optional)

- List the findings raised in the respective report using the following format (x number of category 1 findings – y number of category 2 findings – z number of category 3 findings) (e.g. 3-1-2 = 3 category 1 findings; 1 category 2 finding and 2 category 3 findings)

Column (5) "Written communication to operator (date)"

- List the date when the written communication to the operator was sent (format: dd-mm-yyyy). Leave blank if no communication was sent because the operator/authority reacted already based on POI.

Column (6) "Receipt confirmed"

- Indicate (Y/N) whether the receipt of the written communication is confirmed (this could be in the form of a fax receipt, e-mail read confirmation or a receipt confirmation in the case of registered mail).

Column (7) "Received on"

- List the date when the operator reply was received (format: dd-mm-yyyy)

Column (8) "Answer Satisfactory"

- Indicate if the answer given by the operator is satisfactory (Y/N/P = Yes/No/Partially)

Column (9) "Findings closed/Supplemental Communication"

- Indicate, based on the reply of operator, whether the findings in the report have been closed I or if a supplemental communication was sent (S). Such supplemental communication should also be sent to the State of oversight. If a supplemental communication was sent, add an additional line filling-in the required fields (1, 5-17).

STATE OF OVERSIGHT SECTION

Column (10) "State of Oversight"

- List the State (ICAO Code) ensuring oversight.

Note: If the State of Registry/Licensing is different than the State of Operator and written communication are sent to those States, add additional line(s) indicating all the concerned States using the following format:

R-State of Registry

L-State of Licensing

Examples:

State of Operator Brazil: SB

State of registry Bermuda: R-TX

State of Licensing United Kingdom: L-EG

Column (11) "Written communication to NAA (date)"

- List the date when the written communication to the NAA was sent (format: dd-mm-yyyy)

Column (12) "Receipt confirmed"

- Indicate (Y/N) whether the receipt of the written communication is confirmed (this could be in the form of a fax receipt, e-mail read confirmation or a receipt confirmation in the case of registered mail).

Column (13) "Reply requested"

- Indicate (Y/N) whether it was requested from the State of oversight a "confirmation that they are satisfied with the corrective actions taken" as provided by article 6.4 (2) of the Annex to Commission Directive 2008/49/EC.

STATE OF OVERSIGHT REPLY

Column (14) "Received on"

- List the date when the NAA reply was received (format: dd-mm-yyyy);

Column (15) "Answer Satisfactory"

- Indicate if the answer given by the NAA is satisfactory (Y/N/P = Yes/No/Partially);

Column (16) "Findings closed/Supplemental communication"

- Indicate, based on the reply of the NAA, whether the findings in the report have been closed (C) or if a supplemental communication was sent (S). Such supplemental communication should also be sent to the operator. If a supplemental communication was sent add an additional line filling-in the required fields (1, 5-17).

Note:

1. If a reply (column 13) is not requested from the State of oversight then the fields 14-16 may be left empty. In this case, when the findings of a report are considered closed this should be reflected by entering 'C' in the column 9 only.
2. If a reply (column 13) is requested from the State of oversight the closure of the findings should be reflected by entering 'C' in both columns 9 and 16.

Column (17) "Additional Information"

- Please indicate any additional information relevant to the follow-up of the inspection (e.g. operator reacted based on the POI, closure of findings confirmed/not confirmed by re-inspection).

7 LIST OF APPENDICES

- Appendix 1: List of Pre-described SAFA Findings (International Commercial Operations –Aeroplanes);
- Appendix 2: Instructions for the completion of the SAFA inspection report
- Appendix 3: Class of Actions matrix
- Appendix 4: Information leaflet templates
- Appendix 5: Follow-up written communication templates
- Appendix 6: Template for the monthly report on follow-up actions
- Appendix 7: SAFA National Coordinator tasks

Appendix 1

Detailed inspection instructions including pre-described findings

Part 1 Operations International Commercial Air Transport – Aeroplanes

Inspection Item	Inspections Item Title	Inspecting Instructions
A01	General Condition	<p>Check general condition.</p> <p>Check the stowage of interior equipment, suitcases, navigation chart cases etc.</p> <p><i>Note: inspectors should make sure that manuals, flight cases etc. were indeed not appropriately stored during the incoming flight. In some cases it can be proven (or at least reasonably assumed) that the manuals were not stored during flight since e.g. there is no suitable storage area. However, in those cases where it cannot be excluded that the crew indeed stores the manuals during flight, no finding should be raised. Such manuals and cases may have indeed been used by the crew during taxi and the turn-around before the inspector enters the flight deck.</i></p> <p>If a flight crew compartment door is installed, check the door locking/unlocking mechanism.</p> <p>On passenger carrying aeroplanes with MTOW > 45.500 kg (or with a passenger seating capacity more than 60 pax) check for installation and serviceability of the reinforced cockpit door.</p> <p>Check the means to monitor the door area from either pilots seat. Some means will fully satisfy the requirements, such as CCTV systems. However, means such as the spyhole do not enable the crew to monitor the door area from their seat and lead to a cat. 2 finding. The visual monitoring of the door area from the cockpit is of paramount importance, therefore alternative procedures such as an audio signalling code in addition to a spyhole are also considered to be not in compliance as they do not provide for an actual visual monitoring; therefore, a cat. 2 finding should be raised in such a situation as well. However, when this has been compensated during critical phases of the flight, for instance by the use of an additional crew member to monitor the area on behalf of the flight crew, or by denying access to the flight deck during these phases, it still constitutes a finding, but with a lesser impact on safety (hence the cat. 1 should be used). The presence in the cockpit of an additional crew member during all phases of the flight is considered to fully meet ICAO requirements.</p> <p>Check the condition of the flight deck windows (e.g. windshield cracks, possible delamination,...)</p> <p>Check if the crew composition meets the minimum crew requirements (available in the AFM)</p> <p>Check that no equipment is installed such that it obviously does not meet the systems design features and emergency landing provisions in Annex 8 Part IIIA/B, Chapter 4 (e.g. when equipment installed on the glare shield significantly impairs the pilots vision).</p> <p>Check the presence and serviceability of the windshield wipers (if required for the flight).</p> <p>Check if any electrical cables/wires are unintentionally exposed.</p> <p>Check the serviceability of the warning panel lights.</p> <p>When circumstances dictate (e.g. aircraft undergoes significant delay), check whether the crew members are in compliance with the flight and duty time rules contained within the Operations Manual.</p>

Inspection Item	Std.	Cat.	Std. ref.	Standard's Text	Pre-described Finding	PDF code	Instructions for completing the detailed description
A01	1	1	A6-I-13.2.2	From 1 November 2003, all passenger-carrying aeroplanes of a maximum certificated take-off mass in excess of 45 500 kg or with a passenger seating capacity greater than 60 shall be equipped with an approved flight crew compartment door that is designed to resist penetration by small arms fire and grenade shrapnel, and to resist forcible intrusions by unauthorized persons. This door shall be capable of being locked and unlocked from either pilot's station.	Door (un)locking mechanism at (Co)Pilot station N/A or U/S	A01-01	
A01	1	2	A6-I-13.2.1	In all aeroplanes which are equipped with a flight crew compartment door, this door shall be capable of being locked, and means shall be provided by which cabin crew can discreetly notify the flight crew in the event of suspicious activity or security breaches in the cabin.	No means provided for crew notification	A01-02	
A01	1	1	A6-I-13.2.3	In all aeroplanes which are equipped with a flight crew compartment door in accordance with 13.2.2: b) means shall be provided for monitoring from either pilot's station the entire door area outside the flight crew compartment to identify persons requesting entry and to detect suspicious behaviour or potential threat.	Means to monitor the door area not available from either pilot's station (but alternative operational procedures established for the critical phases of the flight)	A01-03	Indicate the particulars of the situation observed
A01	1	2	A6-I-13.2.3	In all aeroplanes which are equipped with a flight crew compartment door in accordance with 13.2.2: b) means shall be provided for monitoring from either pilot's station the entire door area outside the flight crew compartment to identify persons requesting entry and to detect suspicious behaviour or potential threat.	Means to monitor the door area not available from either pilot's station (and no alternative operational procedures established)	A01-04	
A01	1	3	A6-I-13.2.3	In all aeroplanes which are equipped with a flight crew compartment door in accordance with 13.2.2: b) means shall be provided for monitoring from either pilot's station the entire door area outside the flight crew compartment to identify persons requesting entry and to detect suspicious behaviour or potential threat.	Means to monitor the door area not available or U/S (outside MEL limits)	A01-05	
A01	1	3	A6-I-13.2.1	In all aeroplanes which are equipped with a flight crew compartment door, this door shall be capable of being locked, and means shall be provided by which cabin crew can discreetly notify the flight crew in the event of suspicious activity or security breaches in the cabin.	Cockpit door lock N/A or U/S (outside MEL limits)	A01-06	
A01	M	3			Damages to flight deck windows outside AMM limits	A01-07	Describe nature and extent of damage

Inspection Item	Std. Cat.	Std. ref.	Standard's Text	Pre-described Finding	PDF code	Instructions for completing the detailed description
A01	1	3	A6-I-9.1.1	The number and composition of the flight crew shall not be less than that specified in the operations manual. The flight crews shall include flight crew members in addition to the minimum numbers specified in the flight manual or other documents associated with the certificate of airworthiness, when necessitated by considerations related to the type of aeroplane used, the type of operation involved and the duration of flight between points where flight crews are changed.	Insufficient number of flight crew members	A01-08 Describe the observed situation vs. the requirements in the OPS Manual
A01	1	3	A6-I-2.2.10.2	An operator shall formulate rules to limit flight time and flight duty periods and for the provision of adequate rest periods for all its crew members. These rules shall be in accordance with the regulations established by the State of the Operator, or approved by that State, and included in the operations manual.	Flight Crew member not in compliance with the flight and duty time rules	A01-09 Describe the observed situation vs. the requirements in the OPS Manual
A01	1	3	A8-III-A-4.1.7.1 A8-III-B-4.6.1	Provisions shall be made in the design of the aeroplane to protect the occupants, in the event of an emergency landing, from fire and from the direct effects of deceleration forces as well as from injuries arising from the effect of deceleration forces on the aeroplane's interior equipment.	Interior equipment and/or other object(s) not correctly secured or stowed during flight	A01-10 Indicate what interior equipment/object(s) was not secured
			A8-III-A-4.1.6.(c) A8-III-B-4.2.(c)	Crew environment. The design of the flight crew compartment shall be such as to minimize the possibility of incorrect or restricted operation of the controls by the crew, due to fatigue, confusion or interference.		
A01	1	3	A6-I-13.2.2	From 1 November 2003, all passenger-carrying aeroplanes of a maximum certificated take-off mass in excess of 45 500 kg or with a passenger seating capacity greater than 60 shall be equipped with an approved flight crew compartment door that is designed to resist penetration by small arms fire and grenade shrapnel, and to resist forcible intrusions by unauthorized persons. This door shall be capable of being locked and unlocked from either pilot's station.	Reinforced cockpit door not installed (on passenger flights)	A01-11 Indicate the particulars of the situation observed
A01	M	3		Lights U/s in warning panel (outside MEL limits)	A01-12 Indicate the particulars of the situation observed	
A01	1	2	A8-III-A-4.1.6d, A8-III-B-4.2d	Pilot vision. The arrangement of the pilot compartment shall be such as to afford a sufficiently extensive, clear and undistorted field of vision for the safe operation of the aeroplane, and to prevent glare and reflections that would interfere with the pilot's vision. The design	Cockpit installations significantly decreasing pilots vision	A01-13 Indicate the particulars of the situation observed

SAFA Ramp Inspection Procedures

Inspection Item	Std. Cat.	Std. ref.	Standard's Text	Pre-described Finding	PDF code	Instructions for completing the detailed description
			features of the pilot windshield shall permit, under precipitation conditions, sufficient vision for the normal conduct of flight and for the execution of approaches and landings.			
A01	1	3	A8-III A-4.1.6d, A8-III B-1.3	Pilot vision. The arrangement of the pilot compartment shall be such as to afford a sufficiently extensive, clear and undistorted field of vision for the safe operation of the aeroplane, and to prevent glare and reflections that would interfere with the pilot's vision. The design features of the pilot windshield shall permit, under precipitation conditions, sufficient vision for the normal conduct of flight and for the execution of approaches and landings.	Windshield wipers/cleaning/drying system not installed or inoperative and their usage required due to precipitation (outside MEL limits)	A01-14 Indicate the particulars of the situation observed
A01	1	3	A8-III A-1.4, A8-III B-1.3 A8-III A-1.5, A8-III B-1.4	Under all anticipated operating conditions, the aeroplane shall not possess any feature or characteristic that renders it unsafe. Compliance with the appropriate airworthiness requirements shall be based on evidence either from tests, calculations, or calculations based on tests, provided that in each case the accuracy achieved will ensure a level of airworthiness equal to that which would be achieved were direct tests conducted. The tests of 1.5.1 shall be such as to provide reasonable assurance that the aeroplane, its components and equipment are reliable and function correctly under the anticipated operating conditions.	Equipment installations obviously not in compliance with Annex 8, Part IIIA/B, Chapter 4	A01-15 Indicate the particulars of the situation observed
A01	1	2	A8-III A-9.1	The operating limitations within which compliance with the Standards of this Annex is determined, together with any other information necessary to the safe operation of the aeroplane, shall be made available by means of an aeroplane flight manual, markings and placards, and such other means as may effectively accomplish the purpose. The limitations and information shall include at least those prescribed in 9.2, 9.3 and 9.4. A8-III B-7.1 The operating limitations within which compliance with the Standards of this Annex is determined, together with any other information necessary to the safe operation of the aeroplane, shall be made available by means of a flight manual, markings and placards, and such other means as may effectively accomplish the purpose. The limitations and information shall include at least those prescribed in this sub-part.	Operational flight deck markings and/or placards missing or incorrect	A01-16 Indicate the particulars of the situation observed

SAFA Ramp Inspection Procedures

Guidance material

Inspection Item	Inspections Item Title	Inspecting Instructions
A03	Equipment	<p>All Flights:</p> <p>a) TAWS (E-GPWS)</p> <p>Check if installed and serviceable. If unserviceable check if properly deferred (reported in the ATLB) and check if still within MEI dispatch limits. Verify that the installed GPWS has a forward looking terrain avoidance function. If the terrain database is found to be expired, verify against the MEI the dispatch conditions.</p> <p>When an operational test can be performed by the pilot, it should be requested.</p> <p><i>Note: On certain aircraft such a test cannot be performed by the pilots but only by maintenance personnel: this does not constitute a finding.</i></p> <p><i>Note: some C/S-built aircraft are equipped with GPWS systems like the SSOS or SPPZ (SPBZ) that do not fulfill the ICAO requirements regarding the E-GPWS. Only the 7-channel (SRPBZ) with forward looking terrain avoidance function meets the ICAO requirements.</i></p> <p>In the case where an aircraft is found not to have TAWS (E-GPWS) installed then the competent authority should consider imposing an immediate operating ban on that aircraft. The aircraft should be allowed to depart only on a non-revenue flight.</p> <p>b) ACAS II (TCAS)</p> <p>Check if installed and serviceable. If unserviceable check if properly deferred (reported in the ATLB) and check if still within MEI dispatch limits.</p> <p>When an operational test can be performed by the pilot, it should be requested.</p> <p><i>Note: On certain aircraft such a test cannot be performed by the pilots but only by maintenance personnel: this does not constitute a finding.</i></p> <p>In the case where an aircraft is found not to be fitted with a compliant TCAS/ACAS II system then the competent authority should consider imposing an immediate operating ban on that aircraft. The aircraft should be allowed to depart only on a non-revenue flight.</p> <p>For aircraft with their first CoA issued on or after 1 March 2012, check if ACAS II, software version 7.1 is installed. This can be done by performing a test of aural warnings; version 7.1 will have the extra resolution advisory "Level off, level off" (this requirement is only applicable in the territory of the EU Member States, Iceland, Norway and Switzerland).</p> <p>c) Cockpit Voice Recorder</p> <p>When an operational test can be performed by the pilot, it should be requested.</p> <p><i>Note: On certain aircraft such a test cannot be performed by the pilots but only by maintenance personnel: this does not constitute a finding.</i></p> <p>Flights in designated airspace:</p> <p>a) RVSM</p> <p>Check whether the equipment unserviceability (if any) renders the aircraft non-RVSM capable (check with Doc 9614).</p> <p><i>Area of applicability (ICAO Doc 7030):</i></p>

SAFA Ramp Inspection Procedures

Guidance material

Inspection Item	Std.	Cat.	Std. ref.	Standard's Text	Pre-described Finding	PDF code	Instructions for completing the detailed description
A03	1	3	A6-I-6.1.1	<p>2.1.1 RVSM shall be applicable in that volume of airspace between FL 290 and FL 410 inclusive in the following flight information regions/upper flight information regions (FIRs/UFRs): Amsterdam, Ankara, Athinai, Barcelona, Beograd, Berlin, Bodø, Bratislava, Bremen, Brest, Brindisi, Bruxelles, Budapest, Bucharest, Chisinau, Düsseldorf, France, Frankfurt, Hannover, İstanbul, Kaliningrad, Kharkiv, KØbenhavn, Kyiv, Lisboa, Ljubljana, London, Lviv, Madrid, Malmö, Malta, Milano, Minsk, München, Nicosia, Odessa, Oslo, Praha, Rhein, Riga, Roma, Rovaniemi, Sarajevo, Scottish, Shannon, Simferopol, Skopje, Sofia, Stavanger, Stockholm, Sundsvall, Switzerland, Tallinn, Tampere, Tirana, Trondheim, Varna, Vilnius, Warszawa, Wien, Zagreb.</p> <p>2.1.2 RVSM shall be applicable in either all, or part of, that volume of airspace between FL 290 and FL 410 inclusive in the following FIRs/UFRs: Canaries (AFI Region), Casablanca, Tunis.</p>	<p>b) RNAV</p> <p>Check that the aircraft is equipped with RNAV equipment. For operations in airspace designated as B-RNAV or P-RNAV check if the aircraft meets the Required Navigation Performance (RNP) requirements.</p> <p>c) MNPS</p> <p>Check whether the equipment unserviceability (if any) renders the aircraft non-MNPS capable.</p> <p>Area of applicability (ICAO Doc 7030): The MNPS shall be applicable in that volume of airspace between FL 285 and FL 420 within the Oceanic Control Areas of Santa Maria, Shanwick, Reykjavík, Gander Oceanic and New York, excluding the area west of 60°W and south of 38°30'N.</p> <p>d) 8.33 kHz channel spacing</p> <p>Check that radio equipment is 8.33 kHz channel spacing capable. This can be checked by requesting to select an 8.33 kHz channel, for example, 132.055 kHz on the radio control panel. The panel should normally show 6 digits – however some radio control panels may omit the leading “1” and display only 5 digits, e.g. 32.055.</p> <p>Area of applicability: The carriage of 8.33 kHz channel spacing capable radio equipment is mandatory for operations in the specified ICAO EUR region for flights above FL 195.</p>	<p>A03-01</p> <p>Indicate the particulars of the situation</p>	

Note: Inspectors, while checking this inspection item, should also assess whether the required equipment is obviously not being used, e.g. if an equipment is found to be covered and therefore rendered unusable, this should result in a cat. 3 finding. If equipment is found to be obstructed (e.g. by a manual) during flight preparation phase, this should not lead to a finding.

A04	Manuals	<p>Check for presence of Operations Manual and Aircraft Flight Manual. (Note: flight manual data may be included in the operations manual).</p> <p>Check if their content complies with the requirements and is up to date (e.g. with the latest revision of the AFM).</p> <p><i>Note: Not all parts of the OPS Manual have to be carried on board. As a minimum there shall be available those parts pertaining to flight operations.</i></p> <p><i>Note: in the Ops. manual the following subjects, in particular, could be checked:</i></p> <ul style="list-style-type: none"> - presence of instructions and data for mass and balance control; - the list of the navigational equipment to be carried including any requirements relating to operations where performance-based navigation is prescribed; - Presence of data that enables the crew to carry out performance calculations - Information on fuel planning - Flight and duty time requirements - Safety precautions during refuelling with passengers on board. - Instructions on the carriage of dangerous goods (with DG on board)" <p>Check if the flight crew is able to understand the language in which the OPS Manual and/or AFM are written.</p> <p><i>Note: ICAO standards do not require the manuals to be written in English language. Such a case does not constitute a finding unless it is obvious that the pilot(s) do not understand the language in which the manuals are written.</i></p> <p><i>Note: the impact on safety is different in case only one flight crew member is not able to understand the language of the OM, or if it is not understood by any of the flight crew members. This is reflected in the respective cat 2 and cat 3 pre-described findings.</i></p> <p><i>Note: Annex 6 does require that specific parts of the Operations Manual be approved by the National Authority. However, the Annex does not require that proof of such approval be contained in the manual itself. It is up to each and every Contracting State to determine how they approve a manual and whether evidence of such approval is required in the manual. The absence of a specific approval does not constitute a finding.</i></p>

Inspection Item	Inspections Item Title	Inspecting Instructions
A07	Minimum Equipment List	<p>Note: An increasing number of operators do not have the MEL on board, but available via a data downlink. This should be considered as an acceptable alternative.</p> <p>Check if the MEL is not less restrictive than MMEL. Note: If it is found that the MEL does not incorporate the latest revision of the MMEL, this should be reported as a General Remark (cat. G). Note: Checking the revision status of the MEL might not be enough, in case the last revision introduced less restrictive conditions, the MEL might not have to be updated. A missing revision number is no reason to raise a finding; the document control process is to be agreed by the overseeing authority. If it is found that a MEL is not up to date resulting in a less restrictive document, questions may be raised in the follow-up phase on the appropriate document control. Note: It takes time before more strict requirements introduced by a new MMEL will be implemented. Inspectors should allow a timeframe of at least 4 months (since publication of the revised MMEL) for the revision of a MEL.</p> <p>Check if MEL content reflects actual equipment installed on the aircraft and takes into account the special approvals in the operations specifications. Check if the MEL contains the (M) maintenance and/or (O) operational procedures.</p> <p>Check if the MEL is fully customised. For example, the MEL should not contain a reference to regulatory material ("ATA 23 Communication systems – Any in excess of those required by 14 CFR may be inoperative provided it is not powered by Standby Bus and is not required for emergency procedures.") but should mention the actual required number. Note: Mainly for passenger cabin related items, the number may be missing, provided that the MEL reflects an alternate means of configuration control.</p> <p>Check if the deferred defects (if any) are in accordance with the MEL instructions. Note: Annex 6 does require that the MEL is approved by the State of Operator. However, the Annex 6 does not require that proof of such approval be contained in the MEL itself or has to be carried on board. It is up to each and every Contracting State to determine how they approve a manual and whether evidence of such approval is required in the manual. The absence of a specific approval of the MEL on board of the aircraft does not constitute a finding.</p>

A10	AOC or equivalent	<p>Check for presence and accuracy (including the Operations Specifications).</p> <p>Check if format (layout and content) of AOC and OPS Specs is in compliance with Annex 6 (including English translation if written in another language). If the AOC is not carried on board while engaged in commercial operations, apply the procedure described in chapter 4.3 above.</p> <p>Note 1: although ICAO requires a specific layout, no finding but a Category G remark should be raised if the content is in compliance with the ICAO requirements, but the layout is different.</p> <p>Note 2: ICAO Annex 6 requires that the operations specifications specifically mention whether the operator is entitled to transport dangerous goods or not. In case nothing is mentioned, and no other official document is available on board indicating the authorisation to transport dangerous goods, no finding should be raised for this reason only and the operator should be considered to be not approved. In the case the operator was actually or intending to transporting DG, a cat. 3 finding can be raised ("Commercial Air Transport operations not in accordance with the operations specifications").</p> <p>If the AOC contains an expiration date, check if within the validity period.</p> <p>Check if the aircraft operation (inbound and outbound) is in compliance with the Operations Specifications (limitations, special authorisations: Low Visibility Operations (LVO), (BP)RNAV, RVSM, MNPS, ETOPS, dangerous goods, and others required for the particular type of operation).</p> <p>Note: EU-OPS is less restrictive than ICAO on the carriage of a copy of the AOC on board: where ICAO requires a certified true copy, EU-OPS requires in OPS 1.125 that "the original or copy" is carried during each flight. Therefore, if an inspector finds a non-certified copy of the AOC on board this may not constitute a finding (however may be recorded as a cat. G remark).</p> <p>Note: If the AOC and/or OPS Specs were not found on board during the inspection, the Category 3 PDF reflecting this shall be used. If no document is provided during the time of inspection, the aircraft can still be released as a non-commercial General Aviation flight. However, if during the follow-up process the appropriate evidence is received that a valid document was issued at the time of the inspection, the finding should be downgraded to the Category 1 finding created for this purpose (see Chapter 4.3 above).</p>

A11	Radio Licence	<p>Check for presence and accuracy.</p> <p>Note: Following the Articles 29e and 30 of the Chicago Convention, a radio licence is a licence to install radio transmitting apparatus. ICAO does not specify the information to be mentioned on the Radio Licence. The requirement to have a radio licence is originating from Article 18 of the Radio Regulations from the International Telecommunications Union, which requires the issuing State to include, besides the name/callsign, "the general characteristics of the installation" into the licence. However, the exact content of such a licence is only given by the ITU as a recommendation only (Recommendation 7 Rev. WRC-97). Therefore no finding should be raised on the content of the radio licence, unless the mentioned information is incorrect.</p> <p>Note: Although ICAO does not specifically allow to carry other than the original of the document, it is considered acceptable if a copy certified by the issuing authority is carried on board.</p> <p>Note: If the Radio Licence is not carried on board during the inspection while engaged in commercial operations, apply the procedure described in Chapter 4.3 above.</p> <p>Note: Certain Radio Licences contain expiration date. If a Radio Licence if found to be expired, this should be recorded as a General Remark only.</p>

Inspection Item	Std. Cat.	Std. ref.	Standard's Text	Pre-described Finding	PDF code	Instructions for completing the detailed description
			designator "R", also insert the designator "P" in Item 10 of the flight plan.			
EUR 2.1.2.4			Where a failure or degradation results in the aircraft being unable to meet the P-RNAV functionality and accuracy requirements of 4.1.1.5.2.4 before departure, the operator of the aircraft shall not insert the designator "P" in Item 10 of the flight plan. Subsequently, for a flight for which a flight plan has been submitted, an appropriate new flight plan shall be submitted and the old flight plan cancelled. For a flight operating based on a repetitive flight plan (RPL), the RPL shall be cancelled and an appropriate new flight plan shall be submitted.			
EUR 2.1.2.5			In addition, where a failure or degradation results in the aircraft being unable to meet the B-RNAV functionality and accuracy requirements of 4.1.1.5.2.6 before departure, the operator of the aircraft shall not insert the designators "S" or "R" or "P" in Item 10 of the flight plan. Since such flights require special handling by ATC, Item 18 of the flight plan shall contain STS/RNAV/NOP. Subsequently, for a flight for which a flight plan has been submitted, an appropriate new flight plan shall be submitted and the old flight plan cancelled. For a flight operating based on an RPL, the RPL shall be cancelled and an appropriate new flight plan shall be submitted.			
EUR 2.1.8.1			For flights conducted wholly or partly in the volume of airspace where the carriage of 8.33 kHz channel spacing radio equipment is mandatory, as specified in 3.2.1, in addition to the letter S and/or any other letters, as appropriate, the letter Y shall be inserted in Item 10 of the flight plan for aircraft equipped with 8.33 kHz channel spacing capable radio equipment, or the indicator STS/EXM833 shall be included in Item 18 for aircraft not equipped but which have been granted exemption from the mandatory carriage requirement. Aircraft normally capable of operating above FL 195 but planning to fly below this level shall include the letter Y as specified above.			
EUR 2.1.8.2			In case of a change in the 8.33 kHz capability status for a flight planned to operate in the area specified in 3.2.1, a modification message shall be sent with the appropriate indicator inserted in the relevant item.			
EUR 2.1.5.1			Operators of RVSM approved aircraft shall indicate the approval status by inserting the letter W in Item 10 of the ICAO flight plan

A15	Hand Fire Extinguishers	<p>Check if the installed extinguisher(s) is at the indicated location and easily accessible.</p> <p>Check if the installed extinguisher(s) is marked with the appropriate operating instructions.</p> <p>Check if the installed extinguisher(s) (including the extinguishing agent release mechanism) is serviceable (check pressure gauge (if installed), check expiration date (if any)). If considerably low weight consider unserviceable.</p>		

Note: Often HFEs in excess of those required (by MEL provisions) may be U/S, however in such a case, check against the MEL to verify compliance with the applicable (M) and/or (O) provisions. If the latter MEL actions have not been applied, a finding should be raised using the "detection/reporting/assessment of significant technical defect" procedure (see chapter 4.2 of the ramp inspection procedure).

Note: ICAO does not require hand fire extinguishers to have an expiration (or next check) date. Operators may employ various systems to monitor the condition of the extinguishers. An extinguisher without a date does not necessarily constitute a finding. However, if the expiry date (or next inspection date) is overdue, consider as unserviceable.

Inspection Item	Inspections Item Title	Inspecting Instructions
B07	Emergency exit, lighting and marking, Torches	<p>Check for presence and condition of the emergency exit signs, lighting and marking and torches.</p> <p>Check for presence and condition of an escape path illumination system.</p> <p>Check for presence and condition of the visual indication of the path to emergency exits in smoke filled cabins.</p> <p>Check for the presence of operating instructions on the emergency exits.</p> <p><i>Note: Inspectors should be reminded that there is a difference between illuminated escape paths and a visual indication of the path to emergency exits in smoke filled cabins. Aeroplanes over 5 700 kg, for which application for certification was submitted before 13 June 1960, are not required to have an illumination of the escape path and exits. Aeroplanes over 5 700 kg, for which application for certification was submitted before 2 March 2004, are not required to have the visual indication of the path to emergency exits in smoke filled cabins. If an illuminated visual indication system is used, by means of low-mounted lights or the photoluminescent system, both requirements are met. Although the visual indication is not required by ICAO for most aircraft, the vast majority of aircraft is already equipped with such indications. Any defects of such means of indication should be governed by the MEL; the finding should make reference to the MEL.</i></p> <p>Check for appropriate flashlights are readily available at all crew member stations.</p> <p>Check their condition, serviceability and access. Please note that flights departing in daylight, but extending into the night, shall meet this requirement.</p> <p><i>Note: Only aircraft operated at night require electric torches for the crew. This includes flights departing in daylight but extending into the night, and aircraft departed at night and arrived in daytime. When inspecting daylight only flights, the absence or unserviceability of any electric torch does not constitute a finding. This should however be reported as General Remark (Cat. G).</i></p> <p><i>Note: If the proper functioning of the torch is significantly affected as a result of weak batteries, consider it unserviceable.</i></p> <p><i>Note: If only personal torches are available, this should not be considered as a finding provided they are readily available to the cabin crew from their normal positions. This should however be reported as a General Remark (Cat. G).</i></p>

Inspection Item	Inspections Item Title	Inspecting Instructions					
B12	Access to emergency exits	<p>Check floor/carpets/panels condition.</p> <p>Check if access to emergency exits impeded by baggage/seats/tables</p> <p>Note: Certain types of emergency exits may be oversized. Having seat rows next to such an exit, might not necessarily constitute a finding. As long as the remaining projected opening meets the minimum dimensions required for certification, no finding should be raised.</p> <p>Note: The row of seats ahead an emergency exit must not recline, however the row adjacent to the exit (namely the 'exit row') might recline, provided that no further emergency exit is immediately behind.</p> <p>Note: If the condition of the tray table latch is such that it fails to maintain the table in its upright position when it is subject to deceleration forces or shockloads, it should be raised as a finding. However, the categorisation depends on the location of the table concerned (adjacent to an emergency exit or not).</p> <p>Note: Depending on the certification standards, certain aircraft types may have special table latches (one-way or recessed locks on tray table latches) near the emergency exits which should prevent inadvertent release of the tables during the evacuation of the aircraft. Only for those aircraft the absence of the special latches should be considered as a finding.</p> <p>Inspectors should therefore be particularly cautious while identifying such findings.</p>

Appendix 2

Instructions for the completion of the SAFA Ramp inspection report

(Appendix 1 to the Commission Directive 2008/49/EC)

General instructions:

- If any airport code, operator code or aircraft type is missing, do not use temporary codes or existing but incorrect Codes. Contact the SAFA coordination department of the Agency and the requested code will be added after verification.
- In the column "Checked" of the checklist, only mark those items which are inspected. Be careful not to mark e.g. C09 (propellers) on aircraft with jet engines.
- In the column "remark" those items should be marked where there is either a finding or a (cat G) remark.

Please find below detailed instructions for each information field to be completed by the inspector:

No.:	Report identification number generated by the centralised database, consisting of: <ul style="list-style-type: none">• Identification of the NAA (8 digits maximum e.g. DGAC-F or CAA-UK);• Year (4 digits e.g. 2001);• Sequence number (4 digits maximum, starts at 1 every year).
Source:	"RI" (the same report was used for the "standard report").
Date:	Date of the inspection (format: DD-MM-YYYY).
Place:	Place of the inspection: <ul style="list-style-type: none">• use the 4 digit coding from ICAO Doc. 7910 or/and the locations full name);• If the location does not have an ICAO indicator, use ZZZZ and specify in the "Additional information box" the location.
Local Time:	Local time when the inspection started (format: 17:45).
Operator:	Operators identification: <ul style="list-style-type: none">• Use the 3 digit ICAO coding from ICAO Doc. 8585 and/or the operator's full name);• If the operator does not have an ICAO code yet, the Agency will allocate a temporary code;• The above identification procedure applies also for a private flight, unless the aircraft is not listed in the AOC of an actual operator and is actually used as a privately owned aircraft (not "an airline owned"): in such a case only, use ZZZ, indicate on the type of flight that it was a general aviation flight, ICAO Annex 6, Part II, and specify (if necessary) in the "Additional comment box" further details (e.g. the name of the operator/private pilot). The State of operator (registry) has to be selected manually.
AOC number:	The number as shown on the AOC.
State:	State of the Operator: <ul style="list-style-type: none">• Use the 1 or 2 digit coding from the ICAO Doc. 7910 and/or the State's full name).

SAFA Ramp Inspection Procedures

Guidance material

Type of operation: The type of operation (Part I, II, III as defined by ICAO Annex 6, or national operations).

Route from/
Route to: Airport of departure (for the inbound flight)/destination (for the outbound flight):

- use the 4 digit coding from ICAO Doc. 7910 or/and the locations full name);
- If the location does not have an ICAO indicator, use ZZZZ and specify in the "Additional information box" the location;
- If the aerodrome code is not yet in the database, ask the agency to include the appropriate code.

Flight Number: Flight numbers assigned to the inbound/outbound flight.

Chartered by Operator: The identification of the operator who chartered this flight:

- Use the same identification method as for the operator;
- if not applicable, state NR (not relevant).

Aircraft Type
Registration marks Use the 3 or 4 digit coding from the ICAO Doc. 8643.

The registration marks of the aircraft:

- Pay attention to the correct position of the "dash" (-).

Aircraft configuration: Configuration of the aircraft (Pax, Freight or Combi).

Construction number: The construction number as shown on the official documents.

State of licensing: The State which issued the flight crew licences:

- use the 1 or 2 digit coding from the ICAO Doc. 7910 and/or the State's full name;
- In case the State of Registry of the aircraft is different from the State of licensing, the "Additional comment box" should be used to record if a validation has been issued.

2nd State of licensing: In cases where the flight crew members are licensed by different States, the second State shall be recorded here:

- In case of more than 2 States, use the "Additional comments box".

Where during the SAFA Ramp Inspection some findings were established, specify:

Code: Item code reference (e.g. B06 for Seat belts, C06 for wheel well)
Std: Standard against which the observation was made (one digit):

- I for ICAO standard,
- N for national standard,
- M for manufacturer's standard,
- O for others.

Ref: The reference to the used standard (e.g.A6-I-4.3.1 for Annex 6 part 1 article 4.3.1, AMM 32-05-01 for the Aircraft maintenance manual chapter 32-05-01,CC29 for Chicago Convention, article 29)

Cat: Category of the remark:

- 1, 2 or 3 if it is a finding;
- G if the remark only is a general remark, not a finding.

Finding: Description of the finding:

- If a PDF is used, the text cannot be amended in the database. Further details can be entered in the "Detailed description" box;

SAFA Ramp Inspection Procedures

Guidance material

- If the users do not use a PDF, the finding shall be described here. No further details are to be given in the "Detailed description box";
- If the users enter a cat G remark, no description shall be entered here. The remark needs to be described in the "Detailed description" box.

Detailed description

Detailed description of the finding/remark:

- If a PDF is used, further details can be entered here;
- If the users do not use a PDF, no further details are to be given here;
- If the users enters a cat G remark, the remark needs to be described here.

The class of actions taken: This block should indicate the actions required by/imposed by the inspector related to the findings of the Ramp inspection.

- Since the proof of inspection form shall be handed over to the pilot in command after each inspection, the class 1 action should always be marked.

Additional information:

Free text box for any information additional to what has already been provided.

Inspector Name/number

The names and/or numbers of the inspectors who performed the inspection.

Appendix 3

Class of action matrix

		ACTIONS TO BE TAKEN AFTER INSPECTIONS ¹¹			Class of actions		
		Information to Captain (POI)		Information to responsible NAA and Operator's home base	Corrective actions		
		Category 1	Category 2	Class 1	Class 2	Class 3	
Category	Minor	Yes	Yes	No	No	No	
Category 1	Significant	Yes		Yes	Note: Written communication to the operator and to the NAA and copy to operator's home base (findings of several inspections may be summarised in one communication)		
Category 2	Major	Yes		Yes	Note: Written communication to the operator and to the NAA. In case of aircraft damage affecting airworthiness a direct communication with the responsible NAA should be established. The NAA in the State of registry decides about conditions regarding return to flight status. Confirmation afterwards with written communication to the NAA and copy to operator's home base.	Yes Note: the specific actions consisting of operational restrictions, corrective actions before flight or at maintenance-base, grounding and/or entry permit repercussions have to be reported.	
Category 3							

Note: In exceptional cases where multiple category 2 findings have been found and the accumulation of these findings or their interaction justifies a corrective action, the class of action may be increased to a class 3 action.

¹¹ No findings means no cat. 1, 2, or 3 findings, but may include General Remarks.

Leaflet for operators and their authorities

Safety Assessment of Foreign Aircraft

Information for aircraft operators and their competent authority

Introduction

In 1996 the European Civil Aviation Conference (ECAC) established a ramp inspection programme in order to assess the compliance of foreign aircraft with the applicable safety standards as set by the International Civil Aviation Organisation (ICAO). This voluntary programme has become mandatory for all Member States of the European Union as of April 2006. This leaflet is to explain the setup of the programme and the roles of the inspected operator and its competent authority.

Legal basis

Directive 2004/36/CE of the European Parliament and of the Council on the safety of third-country aircraft using Community airports sets obligations for the Member States to inspect third country aircraft (aircraft not used or operated under the control of a competent authority of a Member State) which are suspected of non-compliance with international safety standards. In addition to this obligation, Member States may also inspect EU aircraft and may inspect aircraft according to a spot-check procedure without having any suspicion of non-compliance. The Annex to this directive has been amended by Commission Directive 2008/49/EC.

The obligations set out in the above-mentioned Directive pertain to the EU Member States only. However, the European Aviation Safety Agency has signed working arrangements with a number of non-EU States involving them in the SAFA programme. The EU Member States and the non-EU States are therefore called together the SAFA Participating States¹².

Which aircraft are checked?

The Participating States choose which aircraft to inspect. Besides the obligation that aircraft being suspected of non-compliance with the international safety standards shall be inspected, most participating States carry out random inspections.

What is checked?

A checklist of 54 inspection items is used during a SAFA Ramp Check. It is SAFA policy not to delay an aircraft except for safety reasons. Therefore, as the time between arrival and departure (the turn-around time) may not be sufficient to go through the full checklist, not all 54 items may be inspected. Checks may include:

- licences of the pilots;
- procedures and manuals that should be carried in the cockpit;
- compliance with these procedures by flight and cabin crew;
- safety equipment in cockpit and cabin;
- cargo carried in the aircraft (including the transport of dangerous goods); and
- the technical condition of the aircraft.

The inspections carried out by the Participating States follow a common procedure and are then reported by entering them into the centralised SAFA database of the European Aviation Safety Agency (EASA). It has to be stressed that SAFA inspections are limited to on-the-spot assessments, therefore do not substitute proper regulatory oversight; they cannot guarantee the airworthiness of a particular aircraft.

Proof of Inspection

The Annex to Commission Directive 2008/49/EC obliges the Member States to give to the cockpit crew (or alternatively to other representatives of the operator) a so-called "proof of inspection" form when the inspection has been finalised; this form shows the contact details of the Participating State, the operational details of the flight, the checked inspection items and possible findings. The inspector will request the Pilot in Command to sign a copy of the proof of inspection. This signature is only to confirm that the form has been handed over to the crew; the Pilot in Command does not certify with his/her signature that he/she agrees with the findings. The information on the Proof of Inspection form may be subject to change when entered into the database as a result of quality checks on the findings, and may lead to an amendment, deletion or re-categorisation of findings.

¹² The 44 States engaged in the EU SAFA Programme are: Albania, Armenia, Austria, Azerbaijan, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Moldova, Monaco, Montenegro, Morocco, the Netherlands, Norway, Poland, Portugal, the Republic of Georgia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, the former Yugoslav Republic of Macedonia, Turkey, Ukraine, and the United Kingdom.

SAFA Ramp Inspection Procedures

Guidance material

Findings and follow-up actions

Findings determined during an inspection are categorised according to the magnitude of the deviation of the requirements and to the influence on safety of the non-compliance. Minor deviations (category 1) are reported to the pilot in command. If an inspection identifies one or more significant deviations from the safety standards (category 2 findings), these will also be reported to the operator and its competent authority. Where non-compliances have a major impact on safety (category 3), the flight crew is in addition expected to correct such non-compliances before the aircraft departs. Relevant information not being a deficiency (e.g. no flashlights were on board, however the inspected flight was a daylight flight) may be reported as a category "G" (General) remark.

Follow-up process

The Stakeholders involved in the SAFA process are the State of Inspection, the Operator, the State of Operator and the State of Registry (if different from the State of Operator). These organisations play a key role in the follow-up process after an inspection is conducted:

1. The SAFA inspector debriefs the Pilot in Command and hands over the Proof of Inspection.
2. The inspector requests the Pilot in Command to sign a copy of the Proof of Inspection form.
3. In case of category 2 and/or 3 findings, a written communication will be sent to the operator and to the competent authority overseeing the operator.
4. The operator is requested to reply to the written communication with an action plan which addresses the deficiencies.
5. The competent authority ensuring the oversight of the operator (and/or the airworthiness of the aircraft) may be asked to confirm their agreement on the corrective actions taken.
6. Findings are considered closed by the State of Inspection when the deficiencies have been satisfactorily addressed.
7. Subsequent inspections by any participating State may occur to verify rectification of the deficiencies.

Role of the operator

When requested by the State of inspection, the operator has to provide information to the State of Inspection about the corrective actions taken on the deficiencies. These actions should include a root cause analysis and may consist of any actions taken and/or planned to correct the deficiencies, and any actions to prevent/limit re-occurrence in the future. Failure to send the appropriate information in a timely manner might be considered an indication of the lack of ability and/or willingness to address safety deficiencies (as referred to in the Annex of Regulation (EC) No 2111/2005).

Role of the competent authority

The competent authority is responsible for the oversight of the operator, the aircraft and/or the personnel licensing of the flight crew. The States of Inspection are not taking over this responsibility by performing SAFA inspections. However, the competent authority may use the SAFA inspection results as additional information during their oversight activities. For that reason, any inspections raising category 2 (significant) and/or category 3 (major) findings are forwarded to the competent authority. In certain cases, e.g. following numerous, repetitive or serious findings, the inspecting State may request the competent authority to confirm that they are satisfied by the corrective actions taken and/or planned by the operator. Failure to send the appropriate information in a timely manner might be considered an indication for the lack of ability and/or willingness to address safety deficiencies (as referred to in the Annex of Regulation (EC) No 2111/2005).

Database analysis

All reported data is stored centrally in a computerised database set up and managed by EASA. The database also holds supplementary information, such as lists of actions carried out after an inspection which revealed non-compliances. The information held within this database is reviewed and analysed by EASA on a regular basis. The European Commission and Participating States are informed about the results of the analysis and are advised on any potentially safety hazards identified.

Whom to contact for questions?

The participating States are responsible for the performance of the inspections. In case of any questions resulting from an inspection, the operator should contact the participating State directly. The contact details of the participating State are on the Proof of Inspection form handed over to the crew. General information on the SAFA programme can be found on the website of the European Aviation Safety Agency (http://www.easa.europa.eu/ws_prod/s/safer.php).

SAFA Ramp Inspection Procedures

Leaflet for the general public

Safety Assessment of Foreign Aircraft

Information for the general public

Introduction

The European Civil Aviation Authorities perform since 1996 ramp inspections on aircraft visiting their countries. During such an inspection, the compliance with the applicable International safety standards (issued by the International Civil Aviation Organisation [ICAO]) is checked. These inspections became mandatory for all Member States of the European Union as of April 2006. This leaflet is to explain the setup of the program.

Legal basis

Directive 2004/36/CE of the European Parliament and of the Council on the safety of third-country aircraft using Community airports sets obligations for the Member States to inspect third country aircraft (aircraft not used or operated under the control of a competent authority of a Member State) which are suspected of non-compliance with international safety standards. In addition to this obligation, Member States may also inspect EU aircraft and may inspect aircraft according to a spot-check procedure without having any suspicion of non-compliance. The Annex to this directive has been amended by Commission Directive 2008/49/EC.

The obligations set out in the above-mentioned Directive are for the EU Member States only. However, the European Aviation Safety Agency has signed working arrangements with a number of non-EU States involving them in the SAFA programme. The EU Member States and the non-EU States are therefore called together the SAFA Participating States¹³.

Which aircraft are checked?

The Participating States choose which aircraft to inspect. Besides the obligation that aircraft being suspected of non-compliance with the international safety standards shall be inspected, most Participating States carry out random inspections. Both aircraft used by EU operators and non-EU operators may be inspected.

What is checked?

A checklist of 54 inspection items is used during a SAFA Ramp Check. It is SAFA policy not to delay an aircraft except for safety reasons. As the time between arrival and departure (the turn-around time) may not be sufficient to go through the full checklist, not all 54 items might be inspected. Checks may include:

- licences of the pilots;
- procedures and manuals that should be carried in the cockpit; compliance with these procedures by flight and cabin crew;
- safety equipment in cockpit and cabin;
- cargo carried in the aircraft; and
- the technical condition of the aircraft.

The inspections carried out by the Participating States follow a common procedure and are then reported by entering them into the centralised SAFA database of the European Aviation Safety Agency (EASA). It has to be stressed that SAFA inspections are limited to on-the-spot assessments and cannot substitute for proper regulatory oversight, therefore they cannot guarantee the airworthiness of a particular aircraft.

¹³ The 44 States engaged in the EU SAFA Programme are: Albania, Armenia, Austria, Azerbaijan, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Moldova, Monaco, Montenegro, Morocco, the Netherlands, Norway, Poland, Portugal, the Republic of Georgia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, the former Yugoslav Republic of Macedonia, Turkey, Ukraine, and the United Kingdom.

SAFA Ramp Inspection Procedures

Guidance material

Findings and follow-up actions

A non-compliance found during an inspection is called a finding. Such findings are categorised according to the magnitude of the deviation of the requirements and to the influence on safety of the non-compliance. Minor deviations (category 1) are reported to the Pilot in Command. If an inspection identifies one or more significant deviations from the safety standards (category 2 findings), these will also be reported to the operator and its competent authority. Where non-compliances have a major impact on safety (category 3), the flight crew is in addition expected to correct such non-compliances before the aircraft departs by either correcting the deficiency or by imposing restrictions on the aircraft operations (by e.g. blocking a defective seat for its use by passengers).

Follow-up process

The Stakeholders involved in the SAFA process are the State of Inspection, the Operator, the State of Operator and the State of Registry (if different from the State of Operator). These organisations play a key role in the follow-up process after an inspection is conducted:

1. The SAFA inspector debriefs the Pilot in command and hands over the Proof of Inspection.
2. The inspector requests the pilot in command to sign a copy of the Proof of Inspection form.
3. In case of category 2 and/or 3 findings, a written communication will be send to the operator and to the competent authority overseeing the operator.
4. The operator is requested to reply to the written communication with an action plan that addresses the deficiencies.
5. The competent authority ensuring the oversight of the operator (and/or the airworthiness of the aircraft) may be asked to confirm their agreement on the corrective actions taken.
6. Findings are considered closed when the deficiencies have been satisfactorily addressed.
7. Subsequent inspections by any Participating State may occur to verify rectification of the deficiencies.

Database analysis

All reported data is stored centrally in a computerised database set up and managed by EASA. The database also holds supplementary information, such as lists of actions carried out following inspections which revealed non-compliances. The information held within this database is reviewed and analysed by EASA on a regular basis. The European Commission and Member States are informed about the results of the analysis and are advised on any identified potentially safety hazards.

Whom to contact for questions?

The Participating States are responsible for the performance of the inspections. In case of any questions resulting from an inspection, one should contact the Participating State directly. General information on the SAFA programme may be found on the website of the European Aviation Safety Agency (http://www.easa.europa.eu/ws_prod/s/s_safa.php).

SAFA Ramp Inspection Procedures

Guidance material

Appendix 5 Written communication templates

Template 1 Written communication to aircraft operators

The written communication to the operator to report category 2 and 3 findings should contain the following information:

- a short reference to the SAFA programme,
- why this written communication has been sent (class 2 action),
- reference to the ramp inspection report,
- request for evidence for corrective actions of the deficiencies,
- request the operator to include, as a copy, its competent State of Oversight in the exchange of the corrective actions requested.

Note: The template contains the required information mentioned above. Although the use of this template is encouraged in order to standardise the written communication, elements of this template may be amended where necessary to match the individual cases.

Dear Sir,

I kindly ask your attention for the following:

Your aircraft has been inspected in the scope of the European SAFA programme (Safety Assessment of Foreign Aircraft). As described by the SAFA programme procedures, the ramp inspection reports are, in the case of significant and/or major findings, sent to both the concerned operator and the authorities responsible for the oversight of that operator. A copy of the ramp inspection report, as it has been entered into the centralised European database, is attached.

Concerning the findings categorised as category 2 or 3, the SAFA procedures require me to request evidence of corrective action(s) that have been or will be undertaken to correct these findings and to prevent re-occurrence in the future. You may inform me (in writing) either directly or through your authority. As your authority is the entity responsible for the safety oversight of your operations, they might be asked to confirm that they are satisfied with corrective actions. In this frame, I would kindly invite you to also transmit to their services a copy of the elements requested aforementioned.

I thank you for your cooperation in the field of air transportation safety, and inform you that additional ramp inspections may occur when aircraft of your airline lands on the territory of one of the States participating in the SAFA programme.

Should you require any additional information on this matter, do not hesitate to contact our services.

Yours faithfully,

SAFA Ramp Inspection Procedures

Guidance material

Template 2 Written communication to National Aviation Authorities

The written communication to the NAA to report category 2 and 3 findings should contain the following information:

- a short reference to the SAFA programme,
- why this written communication has been sent (class 2 action),
- reference to the ramp inspection report,
- optional: request for confirmation that the NAA is satisfied with the corrective actions.

Note: The template contains the required information mentioned above. Although the use of this template is encouraged in order to standardise the written communication, elements of this template may be amended where necessary to match the individual cases.

Dear Sir,

I kindly ask your attention for the following:

Aircraft from one or more operators for which you ensure the oversight, have been inspected in the scope of the European SAFA programme (Safety Assessment of Foreign Aircraft). As described by the SAFA programme procedures, the ramp inspection reports are, in the case of significant and/or major findings, sent to both the concerned operator and the authorities responsible for the oversight of that operator. A copy of the ramp inspection report, as it has been entered into the centralised European database, is attached.

The operator has been requested to provide evidence of any corrective actions taken. [**This sentence is optional: Because of the nature, the number and/or the re-occurrence pattern of the findings, I would like to receive your confirmation that you are satisfied with these corrective actions.**] The information contained in the ramp inspection report as well as the corrective actions taken by the operator might be useful for your oversight activities.

I thank you for your cooperation in the field of air transportation safety, and inform you that additional ramp inspections on the operator(s) may occur when their aircraft land on the territory of one of the States participating in the SAFA programme.

Should you require any additional information on this matter, do not hesitate to contact our services.

Yours faithfully,

SAFA Ramp Inspection Procedures

National Coordinator Tasks

1. GENERAL TASKS

To control and manage the SAFA programme within the Member State the national coordinator could be allocated the following tasks:

- to ensure that the ramp inspection reports referred to in Article 3.1 of the Commission Regulation (EC) No 768/2006 shall be entered without delay into the centralised database (within 15 working days according to paragraph 4.4 of the Annex to the Commission Directive 2008/49/EC).
- to ensure that the ramp inspections shall be prioritised in accordance with Article 2 of the Commission Regulation (EC) No 351/2008.
- to nominate national representatives for the SAFA working groups (on procedures, in depth analysis, ad-hoc);
- being the responsible focal point for the training schedules (initial & recurrent) for all involved national SAFA staff, e.g. inspectors, senior inspectors, data base users, moderators, etc.;
- to represent the Member State at the "European SAFA Steering Expert Group" (ESSG) meetings and, when and where applicable, at other SAFA related meetings;
- to promote and implement the SAFA inspector exchange programme;
- to promote the SAFA programme within the Member State by means of annual reports or other publications;
- to support legal advisors dealing with request for disclosure of SAFA related data. According to Article 6.1 of Directive 2004/36/CE any information received from the other Member States shall be treated as confidential. This means that, whilst national reports might be disclosed depending on national freedom of information act, confidentiality must be ensured for ramp inspection information received from the other States (e.g. accessible by means of the SAFA database);
- to ensure that distribution and adoption of new legislation, latest versions of SAFA procedures are controlled and distributed to all involved SAFA staff;
- to ensure that all SAFA staff involved in ramp inspections are properly trained and scheduled for recurrent training;
- to organise regular meetings with all SAFA staff to maintain a high standard of quality relating to:
 - any changes/updates to the SAFA procedures,
 - feedback on quality issues with regard to SAFA reports e.g. incorrect entry's, mistakes, omissions, etc.,
 - staff issues, e.g. new staff, mentorship, etc. .
- to implement a national SAFA quality control system, for instance consisting of the feature built into the centralised SAFA database (moderator function/workflow function);
- to establish and maintain a system that regulates the access of national operators and NAA staff to the centralised SAFA database;
- to assist the Agency at all stages of the SAFA standardisation audit process and to accompany the inspection team throughout the audit;
- to propose team members for SAFA standardisation visits. Proposed team member(s) shall meet the criteria of article 6.2 of Commission Regulation (EC) No 736/2006.

SAFA Ramp Inspection Procedures

Guidance material

2. REPORTING TO EASA, THE COMMISSION AND THE MEMBER STATES

The SAFA national coordinator:

- maintains good communication with EASA SAFA Programme Coordination for all SAFA related activities;
- timely informs EASA when there are changes to key staff contacts, e.g. national SAFA coordinator, coordinator national operators, database users etc.;
- shall make available, in accordance with article 6.4 of the Annex II to Commission Directive 2008/49/EC, a monthly report with the status of the follow-up actions taken pursuant to ramp inspections (or make use of the associated functionality in the SAFA database);
- according to article 5 of Directive 2004/36/CE:
 - Art. 5.1; Participate in the mutual exchange of information;
 - Art. 5.2; Submit to the Commission and the Member States safety information as collected in standard reports;
 - Art. 5.3; Inform to the Commission and the Member States, without delay, of any potential safety threat.

3. CONTACTS WITH OPERATORS

The national coordinator should ensure that, in accordance with article 6.4(1) of the Annex II to the Commission Directive 2008/49/EC, for all category 2 and 3 finding(s) a written communication will be sent to the operator to request evidence of corrective actions taken. Furthermore he should act as the focal point for any questions regarding performed ramp inspections raised by the inspected operator.

4. CONTACTS WITH AUTHORITIES

The national coordinator should ensure that, in accordance with article 6.4(2) of the Annex II to Commission Directive 2008/49/EC, a written communication will be sent to the responsible State of oversight, addressing the results of the inspections and, were appropriate, request for a confirmation that they are satisfied with the corrective actions performed by the operators under their supervision. Furthermore, he/she should act as the focal point for any questions raised by NAAs regarding performed ramp inspections, or when he/she receives the previously mentioned request for confirmation from other NAAs.

If it concerns an inspection of an Operator licensed in the EU or in another SAFA participating State, the communication should be sent via the relevant SAFA national coordinator. In case there is a dedicated coordinator for national operator(s), information concerning SAFA inspections should also be sent to this coordinator.

If it concerns an inspection on a non-EU or SAFA participating State, the Flight Operations department of the non-Member State may be the most suitable point of contact. Other sources for finding contact details could be the ICAO or NAA Authority website, also on SINAPSE there is (uncontrolled) information on contact details provided.

5. INSPECTION REPORTS ON NATIONAL OPERATORS

The SAFA National Coordinator is requested to ensure proper distribution of SAFA Inspection Reports on Operators, which are under the supervision of his National Authority. This particularly applies where the participating state has not nominated a Coordinator National Operators and therefore this task part of the task of the SAFA National Coordinator.
